Preface *xiii*

1	Research Background and Recent Progress of Perovskite Photovoltaics	1
	<i>Tsutomu Miyasaka and Ajay K. Jena</i>	
1.1	Introduction	1
1.2	History of Halide Perovskite Photovoltaics	5
1.2.1	Discovery of the Perovskite Crystal Form	5
1.2.2	Discovery of Metal Halide Perovskites	6
1.2.3	Beginning of Halide Perovskite Photovoltaics	8
1.3	Semiconductor Properties of Organo-Lead Halide Perovskites	11
1.4	Working Principle of Perovskite Photovoltaics	15
1.5	Compositional Engineering for the Halide Perovskite Absorbers	18
1.6	Strategies to Stabilize Halide Perovskite Solar Cells	20
1.6.1	Bridging the Gap Between Efficiency and Stability	20
1.6.2	Enhancing Intrinsic Stability of Halide Perovskites	22
1.6.3	External and Environmental Stability	24
1.7	Progress of All inorganic and Lead-Free Perovskites	34
1.8	Enhancing Efficiency of Low-Cost Tandem Solar Cells	39
1.9	Space Applications of the Perovskite Solar Cells	42
1.10	Conclusion and Perspectives	44
	References	45
2	Halide Perovskite Materials, Structural Dimensionality, and Synthesis	61
	<i>Yuko Takeoka and David B. Mitzi</i>	
2.1	Three-Dimensional and Low-Dimensional Semiconductors: Organic-Inorganic Perovskites	61
2.2	Perovskite-Type Metal Halide Compounds	62
2.3	Preparation of Two- to Three-Dimensional Lead Halide-Based Perovskite Compounds	66
2.3.1	Spin-Coating Method for Synthesis	67
2.3.2	Vacuum Evaporation Method	70

2.3.3	Two-Step Deposition Method	72
2.3.4	Self-Intercalation Method	73
2.3.5	Layer-by-Layer Self-Assembly Method	74
2.3.6	Langmuir–Blodgett Method	75
2.4	Conclusion	75
	References	76

3 Microstructures and Grain Boundaries of Halide Perovskite Thin Films 81

Yuanyuan Zhou and Nitin P. Padture

3.1	Introduction	81
3.2	Microstructure Characteristics	82
3.2.1	The Nature of Grain Boundaries (GBs)	82
3.2.2	Grain Size and Distribution	86
3.2.3	Crystallographic Texture	87
3.3	Microstructural Evolution in HP Thin Films	88
3.3.1	Genesis of Microstructure	88
3.3.2	Grain Growth	89
3.4	Influence of Microstructures and GBs on Performance and Stability	92
3.4.1	Grain Size Effects	92
3.4.2	Effects of the Nature of GBs	95
3.4.3	Crystallographic Texture Effects	98
3.5	Outlook	99
	Acknowledgments	101
	References	101

4 Defect Properties of Halide Perovskites for Photovoltaic Applications 107

Zewen Xiao and Yanfa Yan

4.1	Introduction	107
4.2	Defect Properties of ABX_3 Halide Perovskites	108
4.2.1	Pb-Based Halide Perovskites	108
4.2.1.1	Point Defects	108
4.2.1.2	Ideal Grain Boundaries	111
4.2.1.3	Ideal Surfaces	113
4.2.1.4	Surfaces and Boundaries in Real Thin Films	114
4.2.2	Sn-Based Halide Perovskites	115
4.2.3	Ge-Based Halide Perovskites	116
4.3	Defect Properties of Halide Perovskites Beyond ABX_3	117
4.3.1	A_2BX_6 Halide Perovskite Derivatives	117
4.3.2	$A_3B_2X_9$ Layered Halide Perovskites	118
4.3.3	$A_2B(I)B(III)X_6$ Halide Double Perovskites	120
4.4	Conclusion	123
	References	123

5	Physics of Perovskite Solar Cells: Efficiency, Open-Circuit Voltage, and Recombination	127
	<i>Wolfgang Tress</i>	
5.1	Theory	127
5.1.1	Power-Conversion Efficiency of a Solar Cell	127
5.1.2	The Ideal Solar Cell: Shockley–Queisser Limit	129
5.1.3	Radiative Limit, Reciprocity, and Detailed Balance	132
5.1.4	Non-radiative Recombination and Role of Contacts	135
5.2	Determining Efficiency and Characterizing Recombination	137
5.2.1	The Current Density–Voltage (J – V) Curve	137
5.2.2	Determination of the Bandgap and the “Voltage Deficit”	138
5.2.3	Electroluminescence	142
5.2.4	Photoluminescence	142
5.2.5	Transient Photoluminescence	144
5.2.6	Electrochemical Impedance Spectroscopy	146
5.2.7	Transient Photovoltage Decay and IMVS	148
5.2.8	The Ideality Factor	150
5.2.9	Space Charge-Limited Currents	152
5.3	Recombination in Perovskite Solar Cells: What We Know	152
5.3.1	Intrinsic Properties of the Perovskite Crystal	153
5.3.1.1	Relatively High Absorption and Fast Radiative Recombination	153
5.3.1.2	Shallow Defects and Defect Tolerance	153
5.3.1.3	High Dielectric Constant	154
5.3.1.4	Low-Frequency Lattice Phonons	154
5.3.1.5	Further Explanations for Reduced Recombination	155
5.3.2	Impurities	156
5.3.3	Grain Boundaries	156
5.3.4	Interfaces: Between Alignment and Passivation	157
5.3.5	Mobile Ions	159
5.4	Summary and Outlook	160
	Acknowledgments	161
	References	161
6	Ionic/Electronic Conduction and Capacitance of Halide Perovskite Materials	173
	<i>Juan Bisquert, Germà Garcia-Belmonte, and Antonio Guerrero</i>	
6.1	Introduction	173
6.2	Overview	174
6.3	Carrier Transport	176
6.3.1	General Determination of Transport Coefficients, Diffusion Coefficient, and Mobility	176
6.3.2	Mixed Ionic/Electronic Conduction and Time Constants	176
6.3.3	Measurement of Ionic Conductivity by Galvanostatic Transient Method	177
6.3.4	Measurement of Ionic Diffusion by Impedance Spectroscopy	179

6.3.5	Ionic Drift Causes Suppression of Luminescence	181
6.4	Interpretation of Capacitances in Semiconductor Devices	183
6.4.1	Dielectric Relaxation	184
6.4.2	Chemical Capacitance	184
6.4.3	Electrode Polarization	185
6.4.4	Depletion Capacitance at the Schottky Barrier	185
6.4.5	Capacitance Associated to Defect Levels	186
6.5	Surface Polarization and Capacitances of MHP	186
6.5.1	General Properties of the Capacitance of MHP	186
6.5.2	Complexity of Mott–Schottky Analysis	191
6.5.3	Measurement of Trap Density	192
6.6	Impedance Spectroscopy and the Equivalent Circuit Model	194
6.6.1	Interpretation of Equivalent Circuits	194
6.6.2	Negative Capacitance Phenomena	197
6.6.3	Application of IS Model to Understanding of Memory Effects	199
6.7	Intensity-Modulated Photocurrent Spectroscopy	200
6.8	Dynamic Response in Time Transient Methods	203
6.8.1	Time Transients of Photovoltage and Charge–Discharge Methods	203
6.8.2	Charge–Discharge Methods	205
6.8.3	Significance of Surface Charging in MHP	205
6.9	Conclusions	207
	References	207
7	Hysteresis of I–V Performance: Its Origin and Engineering for Elimination	215
	<i>Seul-Gi Kim and Nam-Gyu Park</i>	
7.1	Introduction	215
7.2	Hysteresis in Current–Voltage Performance	216
7.3	Material and Structure Design to Reduce Hysteresis	219
7.3.1	Grain Boundary Engineering	219
7.3.2	Interfacial Engineering	220
7.3.3	Defect Engineering	221
7.4	Effect of Alkali Cation Doping	223
7.4.1	Reduction in Hysteresis by KI Doping: A Universal Approach	223
7.4.2	Passivation Effect of Excess KI	225
7.4.3	Location of Potassium Ion in Perovskite	226
7.4.4	In situ Photoluminescence (PL) as a Tool to Measure Ion Migration Kinetics	227
7.5	Summary	229
	References	230

8	High-Efficiency Solar Cells with Polyelemental, Multicomponent Perovskite Materials	233
	<i>Somayeh Gholipour, Yaser Abdi, and Michael Saliba</i>	
8.1	Introduction	233
8.2	Polyelemental, Multicomponent Engineering	235
8.2.1	Single-Cation Perovskites	236
8.2.2	Double-Cation Perovskites: Stabilizing the Black Phase	237
8.2.3	Triple-Cation Perovskites: Stable and Reproducible Devices	238
8.2.4	Quadruple-Cation Perovskite: Improvement of Long-Term Device Stability	239
8.2.5	Methylammonium-Free Perovskite: Staying in the Black Phase with Fewer Components	240
8.3	Conclusions	242
	References	243
9	All-Inorganic Perovskite Photovoltaics	247
	<i>Ajay K. Jena, Zhanglin Guo, and Tsutomu Miyasaka</i>	
9.1	Introduction	247
9.2	All-Inorganic Lead Halide Perovskites	249
9.2.1	Cesium Lead Iodide (CsPbI_3): Black-Phase Stabilization	249
9.2.1.1	Additive Approach	251
9.2.1.2	Quantum Dot-Induced Black-Phase Stabilization	252
9.2.1.3	Stabilization by Surface Treatment	253
9.2.1.4	B-Site Doping	253
9.2.2	Cesium Lead Bromide (CsPbBr_3)	256
9.2.3	Cesium Lead Mixed-Halide Perovskites ($\text{CsPbI}_{3-x}\text{Br}_x$)	257
9.3	All-Inorganic Tin Halide Perovskites	267
9.3.1	CsSnX_3 ($X = \text{I, Br, Cl}$)	267
9.3.2	Cs_2SnX_6 ($X = \text{I, Br}$)	269
9.4	All-Inorganic Silver-Bismuth Halides	270
9.4.1	$\text{Cs}_2\text{M}_1(\text{I})\text{M}_2(\text{III})\text{X}_6$ Double Perovskite	271
9.4.2	$\text{Ag}_a\text{Bi}_b\text{X}_{a+3b}$ Rudorffites	275
9.5	Summary and Outlook	279
	Acknowledgments	280
