

CONTENTS

Part I:

Positive definite kernels and continuous tensor products	1
§ 1. Positive definite and conditionally positive definite kernels	1
§ 2. Projectively invariant positive definite kernels.	5
§ 3. Affine invariant conditionally positive definite kernels. .	10
§ 4. Multiplicative measures	13
§ 5. Factorisable families of projectively invariant positive definite kernels.	17
§ 6. Representations of current groups	22
§ 7. Continuous tensor products of Hilbert spaces and the Araki-Woods imbedding theorem	26
§ 8. The Bose-Einstein field of quantum mechanics.	46

Part II:

Limit theorems for uniformly infinitesimal families of positive definite kernels	48
§ 9. Uniformly infinitesimal families of positive definite kernels	48
§10. Uniformly infinitesimal families of projectively invariant positive definite kernels	55
§11. Uniformly infinitesimal families of continuous normalised positive definite functions	59
§12. Infinitely divisible positive definite functions.	76

Part III:

The analysis of cocycles of first order on some special groups. .	83
§13. Cocycles of direct integrals of representations.	83
§14. Cocycles of induced representations.	86
§15. Cocycles of compact groups	92
§16. Cocycles of abelian groups	93
§17. Cocycles of nilpotent Lie groups	100
§18. Cocycles of semi-simple Lie groups	102
References.	105
