

Contents

Preface to the first and second edition	V
1. Partially ordered sets	1
2. Lattices	2
3. Distributive lattices	3
4. Boolean algebras. Definitions and elementary properties	5
5. Atoms and atomic Boolean algebras	9
6. Homomorphisms, ideals and subalgebras of a Boolean algebra	9
7. Boolean rings	13
8. The Boolean algebra of open regular subsets of a topological space ...	13
9. Prime ideal of a Boolean algebra	15
10. The field representations of a Boolean algebra	19
11. Topological representation of a Boolean algebra	20
12. Topological representation of the reduced field representations of a Boolean algebra	24
13. The partially ordered set of zero dimensional Hausdorff compactifications of a zero dimensional Hausdorff space	25
14. Topological representation of ideals and homomorphic images of Boolean algebras	29
15. Topological representations of the subalgebras of a Boolean algebra ...	30
16. Correspondence between homomorphic maps of Boolean algebras and continuous maps of Boolean spaces. Retracts	33
17. Representation of α -complete Boolean algebras by α -complete fields ..	34
18. The Loomis-Sikorski theorem	36
19. α -representability of α -complete Boolean algebras. Generalization of the Loomis-Sikorski theorem	39
20. A theorem of Sikorski on extension of homomorphisms	42
21. Completion of Boolean algebras	43
22. Free Boolean algebras and Cantor spaces	49
23. Measures on Boolean algebras	56
24. Free α -complete Boolean algebras	60
25. Superatomic Boolean algebras	62
26. Free α -complete and free complete extensions	63
