

CONTENTS

Introduction	1
I. Analytic capacity.	6
1. Basic properties.	6
2. Schwarz's lemma	12
3. Two classical theorems.	13
4. The Ahlfors function.	18
5. Uniqueness of the Ahlfors function, and Havinson's integral representation	24
6. A theorem of Pommerenke	28
7. Analytic capacity and arc length.	31
II. The Cauchy transform.	37
1. Basic properties.	37
2. A characterization of Cauchy transforms	39
3. Painlevé length, Pompeiu variation and a theorem of Havin.	48
4. Two problems on Cauchy transforms	55
III. Hausdorff measure.	58
1. Definitions and fundamentals.	58
2. Removing singularities.	64
3. Newtonian capacity.	67
4. Hausdorff measure and Cauchy transforms	72
5. A problem with Lip_1	81

IV

IV. Some examples.	83
1. Carleson's example	83
2. Cantor sets.	87
3. Vitushkin's example.	95
V. Applications to approximation	107
1. Algebras and Capacities.	107
2. Characterizations of $B(E)$ and $B_h(E)$	110
3. Some consequences.	116
4. Rational approximation	119
Bibliography.	131
