

TABLE OF CONTENTS

<u>Chapter I</u>	<u>Affine algebraic varieties, affine algebraic groups and their orbits</u>	
1.1	Affine algebraic varieties	1
1.2	Morphisms of varieties	2
1.3	Closed subvarieties	2
1.4	Principal open affine subsets	2
1.5	A basic lemma	3
1.6	Product of varieties	4
1.7	Notion of affine algebraic groups	5
1.8	Comorphisms in algebraic groups	5
1.9	Linear algebraic groups	7
1.10	Zariski-topology on varieties	9
1.11	Noetherian spaces	10
1.12	Irreducible components of an algebraic group	12
1.13	Hilbert's second theorem	14
 <u>Chapter II</u>	 <u>First Part: Jordan decompositions, unipotent and diagonalizable groups</u>	
2.1	Definitions and preliminary results	22
2.2	Jordan decomposition for an endomorphism	24
2.3	Jordan decomposition for an endomorphism (continued)	26
2.4	Jordan decomposition for group-elements	29
2.5	Kolchin's theorem	33
2.6	Diagonalizable groups	36
2.7	Rigidity theorem	43

Chapter II Second Part: Quotients and solvable groups

2.8	Solvable groups	46
2.9	Varieties in general	47
2.10	Complete varieties and projective varieties	49
2.11	Quotients	54
	Appendix to 2.11	58
2.12	Borel subgroups	61
2.13	Density and closure	65
2.14	Bruhat lemma	72

Chapter III Reductive and semisimple algebraic groups, regular and subregular elements

3.1	Definitions and examples	76
3.2	Main theorem on semisimple groups	77
3.3	Some representation theory	79
3.4	Representation theory (continued)	83
3.5	Regular elements	93
3.6	Unipotent classes	100
3.7	Regular elements (continued)	110
3.8	Regular elements in simply connected, semisimple groups	116
3.9	Variety of Borel subgroups	128
3.10	Subregular elements	140
	Appendix on the connection with Kleinian singularities	156
	References	159
