

Table of Contents

Introduction	1
Chapter I. Krull Domains.	6
§ 1. The Definition of a Krull Ring.	6
§ 2. Lattices.	8
§ 3. Completely Integrally Closed Rings.	12
§ 4. Krull's Normality Criterion and the Mori-Nagata Integral Closure Theorem.	17
§ 5. Divisorial Lattices and the Approximation Theorem.	22
Chapter II. The Divisor Class Group and Factorial Rings	29
§ 6. The Divisor Class Group and its Functorial Properties.	29
§ 7. Nagata's Theorem.	35
§ 8. Polynomial Extensions.	36
§ 9. Regular Local Rings.	39
§ 10. Graded Krull Domains and Homogeneous Ideals.	41
§ 11. Quadratic Forms.	49
§ 12. Murthy's Theorem.	53
Chapter III. Dedekind Domains.	57
§ 13. Dedekind Domains and a Generalized Approximation Theorem.	57
§ 14. Every Abelian Group is an Ideal Class Group.	61
§ 15. Presentations of Ideal Class Groups of Dedekind Domains.	68
Chapter IV. Descent.	82
§ 16. Galois Descent.	82
§ 17. Radical Descent.	89
Appendix.	103

Chapter V. Completions and Formal Power Series Extensions. . .	104
§ 18. The Picard Group.	105
§ 19. Completions, Formal Power Series and Danilov's Results.	114
Appendix I: Terminology and Notation	131
Appendix II: List of Results.	132
Bibliography.	139
Index	147
