

Contents

Introduction and Acknowledgements	1
I. Thermodynamic Relations in Crystalline Solutions	3
1. Crystalline Solutions	3
2. Choice of a Chemical Component	4
3. General Properties of Solutions	4
a) Chemical Potential	4
b) Ideal Crystalline Solution	5
c) Non-Ideal Solutions and Excess Functions of Mixing	7
d) Chemical Potential and Activity of a Component in a Mineral	8
II. Thermodynamic Models for Crystalline Solutions	11
1. Regular Solution Model	11
a) Zeroth Approximation	11
b) Simple Mixture Model	12
c) Quasi-Chemical Model	12
2. General Relations for Binary, Ternary, and Quaternary Nonideal Crystalline Solutions	14
III. Thermodynamic Stability of a Solution	19
1. Critical Mixing	19
2. General Conditions	19
a) Simple Mixture	20
b) General Nonideal Solution	20
3. Spinodal Decomposition	21
4. Critical Mixing in Quasi-Chemical Approximation	22
5. Immiscibility in Ternary Crystalline Solutions	23
6. Formation of Miscibility Gaps in a Ternary Simple Mixture	24
7. Formation of Miscibility Gap in Asymmetric Ternary Solutions	26
8. Immiscibility in Mineral Systems	29
a) Interpretation of Sequences of Mineral Assemblages	30
b) Intrinsic and Extrinsic Stability	32
c) Immiscibility in Garnets	32

IV. Composition of Coexisting Phases	37
1. Ideal Solution Model	37
a) Distribution of a Component between Two Ideal Binary Crystalline Solutions	37
b) Coexisting Ternary Ideal Solutions	38
2. Nonideal Solutions	39
a) Distribution of a Component between Two Simple Mixtures	39
b) Coexisting Regular Ternary Solutions	41
3. Distribution of a Cation between Two or More Multi-component Minerals	43
4. Composition of Coexisting Minerals and Chemical Equilibrium in Igneous Rocks	46
5. Physico-Chemical Conditions of Formation of Mineral Assemblages as Inferred from Composition of Coexisting Phases	49
6. Stability of Orthopyroxene	52
7. Distribution of Trace Elements	54
V. Measurement of Component Activity Using Composition of Coexisting Minerals	59
1. Compositional Data Available on a Complete Distribution Isotherm	59
2. Composition Data on a Complete Distribution Isotherm and the Activity-Composition Relation in One of the Two Coexisting Phases	61
3. Examples of Calculations	63
VI. Measurement of Component Activities by Analysis of Two-Phase Data	68
1. Symmetrical Mixtures	68
a) Simple Mixture	68
b) Symmetrical Mixture of Higher Order	69
2. Asymmetrical Solutions	69
a) Subregular Model	69
b) Quasi-Chemical Approximation	70
3. Example of Calculation of Functions of Mixing: The CaWO_4 - SrWO_4 System	71
4. Coexisting Phases with Different Crystal Structures	76
VII. Order-Disorder in Silicates	79
1. Order-Disorder and the Crystalline Solution Models	79
2. Intracrystalline Ion Exchange and Site Activities	82

3. Thermodynamic Functions of Mixing	84
4. Kinetics of Order-Disorder	88
VIII. Pyroxene Crystalline Solution	90
1. Orthopyroxene	90
a) Intersite Ion Exchange	90
b) Order-Disorder on Individual Sites and the Choice of a Solution Model	91
c) Determination of Site Occupancy in Heated Ortho- pyroxenes	92
d) Sites as Simple Mixtures	93
e) Thermodynamic Functions of Mixing with Sites as Simple Mixtures	94
f) Sites as Solutions with Quasi-chemical Approximation	102
g) Activity-Composition Relation at 873 °K	103
h) Unmixing	104
2. Calcic Pyroxenes	105
a) Intracrystalline Distribution of Fe^{2+} , Mg and Ca . . .	106
b) Thermodynamic Nature of Mixing in M2 from Data on Orthoenstatite-Diopside Binodal	108
IX. Olivine Crystalline Solution	113
1. BOWEN and SCHAIRER's Data	113
2. Fe-Mg Olivines at 1200° C	115
3. The System Monticellite (CaMgSiO_4)–Forsterite (Mg_2SiO_4)	117
X. Feldspar Crystalline Solution	120
1. Order-Disorder	120
a) Potassium Feldspars	121
b) Sodium Feldspar	121
c) Calcium Feldspar	121
d) Process of Ordering	121
2. Long-Range Ordering Parameters and the Calculation of Al Site-occupancy from Crystal-structural Data	123
3. Ideal Configurational Entropy	124
4. Thermodynamic Functions of Mixing in Binary Feldspars	126
a) Monoclinic Alkali Feldspar	126
b) Plagioclase	130
c) Ternary Feldspars	136
XI. Crystalline Solutions and Geothermometry	138
1. Intercrystalline Equilibria	138
a) Distribution of a Component between Coexisting Simple Mixtures	138

b) Coexisting Plagioclase and Alkali Feldspar	141
c) Distribution of Fe and Mg in Coexisting Minerals . . .	144
d) Distribution of Other Elements	148
2. Order-Disorder	148
a) Fe-Mg Silicates	148
b) Fe-Mg Order-Disorder in Orthopyroxene	151
c) Order-Disorder in Feldspars	152
3. Other Geothermometers	153
Appendix: Computer Programs for Calculation of Thermodynamic Functions of Mixing in Crystalline Solutions	154
