

# TABLE OF CONTENTS

|                                                                                        |    |
|----------------------------------------------------------------------------------------|----|
| CHAPTER I: THE UNIVERSAL APPROACH .....                                                | 1  |
| 1. Definitions .....                                                                   | 1  |
| 2. The Stone-Ćech Compactification of the Discrete Group $T$ .....                     | 5  |
| 3. The Action of $\beta T$ on $X$ .....                                                | 10 |
| 4. Pointed Flows and the Ellis Group .....                                             | 12 |
| CHAPTER II: PROXIMAL FLOWS .....                                                       | 17 |
| 1. Proximal and Distal Flows .....                                                     | 17 |
| 2. Proximal and Weakly Mixing Flows.....                                               | 18 |
| 3. Strongly Amenable Groups .....                                                      | 19 |
| 4. The Universal Proximal Flow .....                                                   | 21 |
| 5. Examples of Proximal Flows .....                                                    | 25 |
| CHAPTER III: STRONGLY PROXIMAL FLOWS .....                                             | 30 |
| 1. Definitions .....                                                                   | 30 |
| 2. Affine Flows .....                                                                  | 32 |
| 3. Amenable Groups .....                                                               | 34 |
| 4. A Countably Infinite Amenable Group has $2^c$ Different Invariant Means .....       | 37 |
| 5. Fixed Point Theorems .....                                                          | 39 |
| 6. Disjointness .....                                                                  | 40 |
| 7. Proximal and Strongly Proximal .....                                                | 40 |
| CHAPTER IV: THE FURSTENBERG BOUNDARY OF A LIE GROUP .....                              | 42 |
| 1. Basic Facts from Lie Group Theory .....                                             | 42 |
| 2. Characterization of Amenable Lie Groups .....                                       | 46 |
| 3. Boundaries of Connected Lie Groups .....                                            | 48 |
| 4. The Boundaries of $SL(n, \mathbb{R})$ .....                                         | 51 |
| 5. Disjointness .....                                                                  | 52 |
| 6. Proximal Flows for Lie Groups .....                                                 | 54 |
| CHAPTER V: $\mu$ -HARMONIC FUNCTIONS .....                                             | 55 |
| 1. $\mu$ -Harmonic Functions and Amenability .....                                     | 55 |
| 2. Contractible Measures .....                                                         | 58 |
| 3. Basic Facts from Probability Theory .....                                           | 60 |
| 4. The Poisson Flow Associated with $\mu$ .....                                        | 63 |
| 5. C.D.-Groups .....                                                                   | 67 |
| CHAPTER VI: HARMONIC FUNCTIONS ON A SYMMETRIC SPACE .....                              | 71 |
| 1. For $\mathfrak{G}$ Simple, $K$ is a Maximal Closed Subgroup of $\mathfrak{G}$ ..... | 72 |
| 2. The Furstenberg Compactification of a Symmetric Riemann Space .....                 | 74 |
| 3. Harmonic Functions on $D$ .....                                                     | 76 |
| 4. The Poisson Space Corresponding to $\mathfrak{G}$ and a Spherical Measure .....     | 82 |
| 5. The Case $\mathfrak{G} = SL(2, \mathbb{R})$ .....                                   | 84 |

|                                                                                                   |     |
|---------------------------------------------------------------------------------------------------|-----|
| CHAPTER VII: EXPONENTIAL GROWTH, AMENABILITY AND FREE SUBGROUPS ON TWO GENERATORS .....           | 87  |
| 1. Exponential Growth .....                                                                       | 88  |
| 2. A Characterization of Strong Proximity which does not Depend upon Measures .....               | 92  |
| 3. A Non-Amenable Group Contains a Finitely Generated Subgroup of Exponential Growth .....        | 94  |
| CHAPTER VIII: THE GENERALIZED BOHR COMPACTIFICATION, I .....                                      | 98  |
| 1. Group Extensions and Almost Periodic Extensions ....                                           | 99  |
| 2. The Generalized (Strong) Bohr Compactification .....                                           | 102 |
| 3. The Generalized Strong Bohr Compactification of a Connected Lie Group with Finite Center ..... | 104 |
| CHAPTER IX: THE GENERALIZED BOHR COMPACTIFICATION, II .....                                       | 112 |
| 1. The $\tau$ -Topology on $G$ .....                                                              | 113 |
| 2. More about Group Extensions and Almost Periodic Extensions .....                               | 120 |
| 3. The Quasifactors $\mathcal{A}(F)$ of $M$ .....                                                 | 122 |
| 4. $G/H$ is the Generalized Bohr Compactification of the Discrete Group $T$ .....                 | 124 |
| CHAPTER X: PI-FLOWS .....                                                                         | 127 |
| 1. RIC-Extensions .....                                                                           | 127 |
| 2. Still More about Almost Periodic Extensions .....                                              | 129 |
| 3. A Construction of RIC-Extensions .....                                                         | 131 |
| 4. PI-Flows .....                                                                                 | 134 |
| 5. <b>A Basis for the <math>\tau</math>-Topology</b> .....                                        | 140 |
| 6. Ellis' Trick .....                                                                             | 142 |
| 7. Structure Theorems .....                                                                       | 144 |
| BIBLIOGRAPHY .....                                                                                | 151 |
