

TABLE OF CONTENTS

Biography of Abraham Robinson	1
Bibliography of Robinson's works	4
Algorithms in Algebra , by A. Robinson	14
<u>Contributed papers:</u>	
J. Barwise and J. Schlipf, On recursively saturated models of arithmetic	42
M. Boffa, A note on existentially complete division rings	56
G. Cherlin, Ideals of integers in nonstandard number fields	60
P. Eklof, Categories of local functors	91
S. Feferman, Impredicativity of the existence of the largest divisible subgroup of an abelian p -group	117
E. Fisher, H. Simmons, & W. Wheeler, Elementary equivalence classes of generic structures and existentially complete structures ..	131
J. Schmerl, The number of equivalence classes of existentially complete structures	170
J. Hirschfeld, Finite forcing and generic filters in arithmetic	172
A. Macintyre, Dense embeddings I : A theorem of Robinson in a general setting	200
K. McKenna, New facts about Hilbert's seventeenth problem	220
P. Roquette, Nonstandard aspects of Hilbert's irreducibility theorem ...	231
G. Sacerdote, Projective model theory and coforcing	276
D. Saracino & V. Weispfenning, On algebraic curves over commutative regular rings	307

S. Shelah, Existence of rigid-like families of abelian p-groups	384
H. Simmons, The complexity of T^f and omitting types in F_T	403
P. Winkler, Model-completeness and Skolem expansions	408
