Preface — V

Acknowledgments — IX

1 Basic set theory and basic logic — 1

- 1.1 Basic set theory — 1
- 1.1.1 Relations — 2
- 1.1.2 Equivalence classes and partitions — 4
- 1.1.3 Functions — 5
- 1.1.4 Induction and recursion — 6
- 1.1.5 Defining sets by recursion — 7
- 1.1.6 Countable sets — 11
- 1.1.7 Cardinality — 13
- 1.1.8 The axiom of choice — 14
- 1.2 Basic logic — 16
- 1.2.1 Propositions and logical connectives — 16
- 1.2.2 Truth tables and truth functions — 17
- 1.2.3 Predicates and quantifiers — 19

2 Propositional logic — 27

- 2.1 The language — 27
- 2.2 Truth assignments — 32
- 2.2.1 Some tautologies — 36
- 2.2.2 Omitting parentheses — 37
- 2.3 Completeness of the logical connectives — 39
- 2.4 Compactness — 44
- 2.5 Deductions — 48

3 First-order logic — 52

- 3.1 First-order languages — 52
- 3.1.1 Terms and atomic formulas — 54
- 3.1.2 Induction on terms principle — 56
- 3.1.3 Well-formed formulas — 58
- 3.1.4 Induction on wffs principle — 59
- 3.1.5 Free variables — 60
- 3.1.6 Notational abbreviations — 62
- 3.1.7 Examples of languages — 63
- 3.2 Truth and structures — 66
- 3.2.1 Structures for first-order languages — 66
- 3.2.2 Satisfaction (Tarski's definition) — 68

3.2.3	Logical implication —	74
3.2.4	Definability over a structure —	76
3.2.5	Classes of structures —	78
3.2.6	Homomorphisms —	80
3.3	Deductions —	90
3.3.1	Tautologies in first-order logic —	91
3.3.2	Generalization and substitution —	93
3.3.3	The logical axioms —	97
3.3.4	Formal deductions —	99
3.3.5	Metatheorems about deductions —	102
3.3.6	Equality —	109
3.3.7	More metatheorems about deductions —	112

4 Soundness and completeness — 119

4.1	The soundness theorem —	119
4.1.1	Technical lemmas —	119
4.1.2	Proof of the soundness theorem —	123
4.2	The completeness theorem —	124
4.2.1	Technical lemmas —	125
4.2.2	Proof of the completeness theorem —	129
4.2.3	The compactness theorem —	134
4.3	Applications —	136
4.3.1	Nonstandard models —	137
4.3.2	Löwenheim-Skolem theorems —	139
4.3.3	Theories —	141
4.3.4	Prenex normal form —	145

5 Computability — 148

5.1	The informal concept —	148
5.1.1	Decidable sets —	149
5.1.2	Computable functions —	151
5.2	Formalizations—an overview —	159
5.2.1	Turing machines —	159
5.2.2	Register machines —	163
5.2.3	Primitive recursiveness and partial search —	166
5.3	Recursive functions —	172
5.3.1	Bounded search —	187
5.4	Recursively enumerable sets and relations —	195
5.4.1	Decidability revisited —	201

6 Undecidability and incompleteness — 205

6.1	Introduction —	205
-----	----------------	------------

6.2	Basic axioms for number theory —	206
6.3	Representable relations and functions —	211
6.3.1	Recursive relations and functions are representable —	219
6.4	Arithmetization of the formal language —	225
6.4.1	The logical axioms revisited —	232
6.5	The incompleteness theorems —	238
6.5.1	Gödel's first incompleteness theorem —	241
6.5.2	Gödel's second incompleteness theorem —	244
6.5.3	Epilogue —	247

Bibliography — 249

Symbol Index — 251

Subject Index — 253
