Chapter 0. <u>BASIC NOTIONS</u>	
0.1 Ringed spaces	1
0.2 Direct and topological inverse images of sheaves	1
0.3 Morphisms of ringed spaces	2
0.4 Monomorphisms and epimorphisms	3
0.5 Finite type, finite presentation, coherence	3
0.6 "	4
0.7 "	5
0.8 Germs of homomorphisms	5
0.9 Extension of germs	6
0.10 Analytic inverse image of sheaves	6
0.11 Trivial extension of sheaves	8
0.12 Coherence Theorem of OKA	8
0.13 Coherence Theorem of CARTAN	8
0.14 Complex spaces, holomorphic maps, subspaces	9
0.15 Nilradical	11
0.16 Reduction	12
0.17 Restriction of a holomorphic map	13
0.18 Analytic local algebras	14
0.19 Holomorphic maps into $\mathbb{C}^n$	14
0.20 Holomorphic maps of a reduced complex space	15
0.21 Germs of complex spaces	16
0.22 Generation of holomorphic maps	17
0.23 Immersions and embeddings	19
0.24 Gluing of complex spaces	20
0.25 Universal property of fibre products and products	21
0.26 Direct product of $\mathbb{C}^n$ and $\mathbb{C}^m$	22
0.27 Inverse images of subspaces	23
0.28 Direct product of subspaces	24
0.29 Direct products (general case)	25
0.30 The diagonal	26
0.31 Universal property of the diagonal	29
0.32 Existence of fibre products	29
0.33 Kernel of a double arrow	30
0.34 Fibre products of reduced complex spaces	30
0.35 Immersion of holomorphic maps	31
0.36 Stein spaces	32
0.37 Theorems A and B	32
0.38 Characterization of Stein spaces	34
0.39 Privileged neighbourhoods	34
0.40 Noetherian properties of coherent sheaves	35
0.41 Transporter and annihilator ideals	37
0.42 Gap sheaves	37
0.43 Analytically rare sets	38
0.44 Lemma of RITT	40
0.45 Hypersurfaces	42
0.46 Constructible sets	43
Chapter 1. <u>COHERENT SHEAVES</u>	
1.1 Complex spaces over $S$	44
1.2 Cones over $S$	44
1.3 Projective varieties over $S$	48
1.4 Linear spaces over $S$	49
1.5 Linear forms	51
1.6 Duality theorem	51

1.7	Change of base for linear fibre spaces	53
1.8	Vector bundles and locally free sheaves	54
1.9	Projective variety over $S$ associated to a coherent sheaf	55
1.10	Proper and finite maps	56
1.11	Algebraic characterization of a finite holomorphic map	57
1.12	Finite Coherence Theorem	58
1.13	Finite spaces over a Stein space	58
1.14	The analytic spectrum	59
1.15	Main theorem on the analytic spectrum	60
1.16	Higher image sheaves	63
1.17	GRAUERTs proper coherence theorem	64
1.18	REMMERTs proper mapping theorem	64
1.19	Semiproper mapping theorem	65
1.20	Cokernel of a double arrow	66
1.21	Analytic equivalence relations	68
1.22	Canonical factorization of a holomorphic map	68
1.23	Holomorphic maps with connected fibres	70
1.24	Stein factorization	70
1.25	Petrification	72
1.26	Proper equivalence relations	74

## Chapter 2. DIFFERENTIAL CALCULUS

2.1	Tangent space of a complex space at a point	77
2.2	Coordinate description of the tangent space	78
2.3	Embedding dimension	79
2.4	Characterization of immersions	79
2.5	Tangent space of a complex space	80
2.6	The Jacobian map of a holomorphic map	81
2.7	Tangent space of a holomorphic map	83
2.8	Tangent space of a direct product	84
2.9	Pfaffian forms and vector fields	84
2.10	Derivations	85
2.11	Restriction of vector fields	89
2.12	A theorem of ROSSI	91
2.13	Corank of a coherent module	93
2.14	Singular locus of a coherent module	95
2.15	Regularity criterion for complex spaces	96
2.16	The singular locus of a reduced complex space	96
2.17	Rank and corank of a holomorphic map	97
2.18	Mersions	99
2.19	Differential characterization of mersions	100
2.20	Holomorphic retractions	102
2.21	Normal space of a holomorphic map	103
2.22	Locally trivial holomorphic maps	106

## Appendix. NORMAL AND MAXIMAL COMPLEX SPACES

2.23	The Riemann removable singularity theorems for manifolds	108
2.24	Weakly holomorphic functions	110
2.25	Universal denominators, non-normal locus	111
2.26	The Normalization Theorem	112
2.27	Removable singularity theorems for normal complex spaces	118
2.28	Lifting of a holomorphic map to the normalizations	121
2.29	The Maximalization Theorem	122
2.30	Lifting of a holomorphic map to the maximalizations	124
2.31	Characterizations of maximal complex spaces, Graph Theorem	126
2.32	Stein spaces and finite holomorphic maps	127

Chapter 3. DEGENERACIES AND FLATNESS

3.1	Dimension of a complex space	131
3.2	Finite holomorphic maps	132
3.3	Spreading of a holomorphic map	134
3.4	Semicontinuity of the fibre dimension	134
3.5	Geometric rank and corank	135
3.6	Analyticity of the degeneracy sets	137
3.7	Image of a holomorphic map with constant fibre dimension	138
3.8	Dimension of the image of a holomorphic map	139
3.9	Open holomorphic maps and dimension formula	142
3.10	"	143
3.11	Definition of flatness	146
3.12	Algebraic consequences	148
3.13	Flatness of finite holomorphic maps	149
3.14	Flatness criterion of BOURBAKI-GROTHENDIECK	152
3.15	Flatness and change of base	152
3.16	Flatness of a holomorphic map into $\mathbb{C}^n$	153
3.17	Projections are flat	155
3.18	Non-flat locus and flatification	155
3.19	Flat holomorphic maps are open	156
3.20	Flatness of open holomorphic maps	157
3.21	Regularity criterion for flat holomorphic maps	159
3.22	Bad loci of a holomorphic map	160

Chapter 4. MODIFICATIONS AND MEROMORPHIC FUNCTIONS

4.1	$\sigma$ -modifications	162
4.2	Proper modifications, purity of branch loci, CHOWs lemma	169
4.3	CHOWs Theorem	171
4.4	Meromorphic functions	173
4.5	Graph of a meromorphic function	177
4.6	Meromorphic functions and meromorphic graphs	181
4.7	Theorem of HURWITZ	183
4.8	Extension of meromorphic functions	185
4.9	Meromorphic functions and modifications	186
4.10	Theorem of WEIERSTRASS-SIEGEL-THIMM	188
