Foreword — VII

Introduction — IX

List of Tables — XVII

List of Figures — XIX

1 Systems of linear equations — 1

- 1.1 Examples — 1
- 1.2 Systems of linear equations and their geometric representation — 11
- 1.3 Fundamental concepts and the Gauss–Jordan reduction method — 14
 - 1.3.1 Gauss–Jordan reduction method — 18
 - 1.3.2 Analysis of the solutions of a system of linear equations — 22
 - 1.3.3 Row operations using SageMath — 27
- 1.4 Exercises — 30

2 Matrices — 35

- 2.1 Sum and product of matrices — 35
 - 2.1.1 Sum of matrices — 35
 - 2.1.2 Product of matrices — 37
 - 2.1.3 Properties of the sum and product of matrices — 43
- 2.2 Elementary matrices and the inverse of a matrix — 45
 - 2.2.1 Computing the inverse of a matrix — 48
- 2.3 Hypothetical applications of linear equations — 52
- 2.4 Integral matrices — 60
- 2.5 Exercises — 63

3 The vector spaces $\mathbb{R}^2$ and $\mathbb{R}^3$ — 68

- 3.1 Vectors in $\mathbb{R}^2$ and $\mathbb{R}^3$ — 68
- 3.2 Linear combinations and linear dependence — 73
 - 3.2.1 Exercises — 77
- 3.3 Geometric properties of $\mathbb{R}^2$ and $\mathbb{R}^3$ as vector spaces — 77
 - 3.3.1 Norm and inner product in $\mathbb{R}^3$ — 79
 - 3.3.2 Orthogonal projection of a vector along another one — 83
 - 3.3.3 Vectors orthogonal to a given one — 86
 - 3.3.4 Cross product in $\mathbb{R}^3$ — 88
 - 3.3.5 Cartesian equation of a plane — 90
- 3.4 Exercises — 92

4 Vector spaces — 96

- 4.1 The vector space $\mathbb{R}^n$ — 96
- 4.2 Linear dependence and dimension — 98
- 4.3 Subspaces of $\mathbb{R}^n$ — 104
- 4.3.1 Operations with subspaces — 108
- 4.4 General vector spaces — 110
- 4.5 Exercises — 113

5 Linear transformations and matrices — 117

- 5.1 Definitions and basic results — 117
- 5.2 Geometric linear transformations in $\mathbb{R}^2$ — 123
- 5.3 Range and kernel of a linear transformation — 127
- 5.4 Matrices and linear transformations — 130
- 5.4.1 Change of basis matrix — 133
- 5.4.2 The vector space of linear transformations — 138
- 5.5 Exercises — 139

6 Determinants — 143

- 6.1 Determinants and volumes — 143
- 6.1.1 Properties of the determinant — 150
- 6.1.2 Existence and uniqueness of the determinant — 151
- 6.2 Cramer's rule, minors, and cofactors — 153
- 6.2.1 Cramer's rule (Whitford and Klamkin) — 155
- 6.3 Determinants and differential equations — 157
- 6.4 Exercises — 160

7 Eigenvalues and eigenvectors without determinants — 165

- 7.1 Minimal polynomial — 165
- 7.1.1 Existence of minimal polynomial and eigenvalues — 165
- 7.1.2 Annihilators and minimal polynomial — 171
- 7.1.3 A minimal polynomial algorithm — 175
- 7.1.4 Computing minimal polynomials with SageMath — 178
- 7.2 Primary decomposition of a vector space — 180
- 7.2.1 Invariant subspaces of dimension one or two — 183
- 7.2.2 Cayley–Hamilton theorem — 184
- 7.3 Exercises — 186

8 Canonical forms of a matrix — 189

- 8.1 Cyclic decomposition and the rational canonical form of a matrix — 189
- 8.2 Other method to compute the minimal polynomial — 197
- 8.3 Jordan canonical form — 201
- 8.4 Matrices with nonreal eigenvalues — 204

8.4.1	Real 2×2 matrices —	205
8.4.2	Matrices whose minimal polynomial has different roots —	207
8.5	Applications —	209
8.5.1	Interacting species —	209
8.5.2	A linear discrete dynamical system —	213
8.5.3	Discrete age-structured population growth —	216
8.5.4	Oscillation of masses coupled with springs —	217
8.6	Exercises —	220
9	Euclidean vector spaces —	223
9.1	Geometric aspects of a vector space —	223
9.1.1	Method of least squares —	231
9.2	Complex vector spaces —	236
9.3	Quadratic forms and bilinear functions —	239
9.3.1	Quadratic forms —	244
9.3.2	Principal-axis theorem —	245
9.3.3	Positive definite matrices —	247
9.3.4	Singular value decomposition (SVD) —	249
9.3.5	Classification of conics —	254
9.4	Adjoint and normal operators —	257
9.5	Exercises —	259
A	Integers, complex numbers, and polynomials —	263
A.1	Well-ordering and mathematical induction —	263
A.2	Permutations —	265
A.3	Complex numbers —	267
A.4	Polynomials in one variable —	271
A.5	Fundamental theorem of algebra —	278
B	SageMath code to compute the minimal polynomial —	283
B.1	SageMath source code for the minimal polynomial algorithm —	283
Bibliography — 285		
Symbols list — 287		
Index — 289
