1	Task Allocation Oriented Users Decisions in Computational Grid ...	1
	Joanna Kołodziej, Fatos Xhafa	
1.1	Introduction	1
1.2	Users' Layers in the Grid Architecture	3
1.3	Grid Users Relations in Grid Scheduling	6
1.3.1	Hierarchic Grid Infrastructure	6
1.3.2	Users' Requirements, Relations and Strategies in Job Scheduling	7
1.4	Game-Theoretic Models for Scheduling and Resource Management	10
1.5	Solving the Grid Users' Games	13
1.5.1	GA-Based Hybrid Approach	13
1.6	A Case Study: Non-cooperative Asymmetric Stackelberg Game of the Grid Users in Independent Batch Scheduling	15
1.6.1	Players' Cost Functions	16
1.6.2	Experiments Setting	17
1.6.3	Computational Results	18
1.7	Other Approaches	19
1.7.1	Computational Economy	19
1.7.2	Neural Networks and Markov Decision Processes	21
1.8	Conclusions and Future Work	22
	References	23
2	Efficient Hierarchical Task Scheduling on GRIDS Accounting for Computation and Communications	25
	Johnatan E. Pecero, Frederic Pinel, Bernabé Dorronsoro, Grégoire Danoy, Pascal Bouvry, Albert Y. Zomaya	
2.1	Introduction	25
2.2	Models	27
2.2.1	System Model	27
2.2.2	Application Model	29
2.2.3	Scheduling Model	31

2.3	Resource Management System and Grid Scheduling	31
2.3.1	Resource Management System	31
2.3.2	Workflow Scheduling on the Grid: A Brief Taxonomy	32
2.4	Proposed Approach: The Hierarchical Scheduler with Cooperative Local Schedulers	35
2.4.1	Recursive Convex Clustering Algorithm	36
2.4.2	DAG Partitioning Problem	39
2.4.3	Local Scheduler	39
2.5	Results	41
2.6	Conclusion	44
	References	44
3	Multi-objective Cooperative Coevolutionary Evolutionary Algorithms for Continuous and Combinatorial Optimization	49
	Bernabé Dorronsoro, Grégoire Danoy, Pascal Bouvry, Antonio J. Nebro	
3.1	Introduction	50
3.2	Related Work	51
3.3	Base Algorithms	52
3.4	The Proposed Cooperative Coevolutionary Evolutionary Algorithms	53
3.4.1	Cooperative Coevolutionary Evolutionary Algorithms	53
3.4.2	Multi-objective Cooperative Coevolutionary Evolutionary Algorithms	56
3.4.3	Parallel Multi-objective Cooperative Coevolutionary Evolutionary Algorithms	57
3.5	Problems	60
3.5.1	Continuous Problems	60
3.5.2	Real-World Combinatorial Problem	60
3.6	Experiments	62
3.6.1	Configuration of Algorithms	62
3.6.2	Methodology for the Comparisons	64
3.6.3	Results	66
3.7	Conclusion and Future Work	71
	References	72
4	Parallel Evolutionary Algorithms for Energy Aware Scheduling	75
	Yacine Kessaci, Mohand Mezmaiz, Nouredine Melab, El-Ghazali Talbi, Daniel Tuytens	
4.1	Introduction	76
4.2	Energy Aware Approaches	77

4.3	Optimization Approaches	78
4.3.1	Aggregation Approach	79
4.3.2	Lexicographic Approach	80
4.3.3	Pareto Approach	80
4.4	System-Level Approaches	80
4.4.1	Hardware-Level Approaches	81
4.4.2	Software-Level Approaches	82
4.5	Approaches According to Targeted Execution System	83
4.5.1	Embedded Systems	83
4.5.2	Computing Systems	84
4.6	Problem Modeling	85
4.6.1	System Model	85
4.6.2	Application Model	86
4.6.3	Energy Model	88
4.6.4	Scheduling Model	89
4.7	A Case Study: A Parallel Evolutionary Algorithm	89
4.7.1	Hybrid Approach	89
4.7.2	Insular Approach	92
4.7.3	Multi-start Approach	92
4.8	Experiments and Results	93
4.8.1	Experimental Settings	93
4.8.2	Hybrid Approach	95
4.8.3	Insular Approach	95
4.8.4	Multi-start Approach	97
4.9	Conclusions	97
	References	98
5	Biologically-Inspired Methods and Game Theory in	
	Multi-criterion Decision Processes	101
	Paweł Jarosz, Tadeusz Burczyński	
5.1	Introduction	101
5.2	Multi-criteria Decision Making and Multiobjective	
	Optimization	102
5.2.1	No-Preference Methods	104
5.2.2	Posteriori Methods	104
5.2.3	Priori Methods	104
5.2.4	Interactive Methods	105
5.2.5	Multiobjective Optimization	105
5.3	Methods for Multiobjective Optimization	106
5.3.1	Evolutionary Algorithms	106
5.3.2	Artificial Immune Systems	107
5.3.3	Game Theory	111
5.3.4	Hybrid Evolutionary-Game Algorithm	112
5.3.5	Immune Game Theory MultiObjective Algorithm	
	IMGAMO	113

5.4	Numerical Tests	116
5.4.1	The ZDT2 Problem	118
5.4.2	The ZDT3 Problem	118
5.4.3	The ZDT6 Problem	120
5.5	Concluding Remarks	122
	References	123
