

TABLE OF CONTENTS

1. Foliations	1
1.1 Involutive bundles	2
1.12 Integrable bundles	5
1.18 Theorem of Frobenius	6
1.21 Foliations with singularities	8
1.28 Homogeneous foliations	12
1.29 Locally homogeneous foliations	12
1.30 Flat connections	12
1.32 Partial connections	14
1.33 Adapted connections	15
1.36 Flat partial connections	17
1.43 Characterization of flatness	18
2. Foliated bundles	20
2.1 Foliated principal bundles	20
2.2 Flat bundles	21
2.4 Bundle with group action	21
2.6 Foliated vector bundles	22
2.14 Normal bundles of foliations	25
2.15 Bott connection	25
2.20 Construction principles for foliated bundles.....	28
2.25 Basic connections in foliated principal bundles.....	29
2.33 Basic connections in foliated vector bundles.....	31
2.35 Examples of basic connections	32
2.43 Obstruction for basic connections	35
2.44 Homogeneous foliated bundles	36
2.50 Locally homogeneous foliated bundles	37

3.	Characteristic classes of flat bundles	39
3.3	A flat connection as a DG-homomorphism	39
3.5	An expression for the curvature	40
3.10	Characteristic classes in $H_{DR}(P)$	42
3.12	G-DG-algebras	45
3.13	$\underline{g}$ -DG-algebras	46
3.14	$\Omega(P)$ as G-DG-algebra	47
3.18	$\Delta \underline{g}^*$ as G-DG-algebra	48
3.19	Invariant and basic subcomplexes	48
3.28	$H(\underline{g}, H)$	50
3.30	The characteristic homomorphism Δ_*	50
3.37	Explicit formula for $\Delta(\omega)$	52
4.	Characteristic classes of foliated bundles	54
4.2	Weil algebra $W(\underline{g})$	54
4.14	Weil homomorphism $k(\omega)$	57
4.16	Chern-Weil homomorphism $h(\omega)$	60
4.21	Filtration of $W(\underline{g})$	62
4.22	Filtration of $\Omega(P)$	62
4.23	Weil homomorphism of an adapted connection	62
4.36	Bott's vanishing theorem	63
4.38	Truncated Weil algebra $W(\underline{g})_q$	66
4.42	Truncated relative Weil algebra $W(\underline{g}, H)_q$	67
4.43	Generalized characteristic homomorphism Δ_* ..	67
4.44	Explicit formula for $\Delta(\omega)$	68
4.48	Characteristic classes of foliations, Godbillon-Vay class, Bott-Haefliger homomorphism, Gelfand-Fuks cohomology	71
4.50	Derived characteristic classes	73
4.51	Geometric significance of Δ_*	74

4.59	Functoriality of Δ_*	79
4.75	Rigidity	85
4.77	Comparison of Δ_* with classifying map	86
4.82	Case of a flat bundle	88
4.86	Case of a Clifford-Klein space form	89
4.87	Non-triviality result for Δ_*	90
4.90	Δ_* as proportionality map	92
5.	Cohomology of $\underline{\underline{g}}$ -DG-algebras	93
5.0	Outline	93
5.1	Lie algebra cohomology with coefficients	95
5.11	Connections in $\underline{\underline{g}}$ -DG-algebras	97
5.13	Filtrations in $\underline{\underline{g}}$ -DG-algebras	98
5.26	Amitsur complex $W_1(\underline{\underline{g}})$	100
5.34	Construction of $\lambda : W(\underline{\underline{g}}) \rightarrow W_1(\underline{\underline{g}})$	102
5.53	Universal homotopy $\lambda^1 : W \rightarrow W \otimes W$	109
5.59	Applications of λ^1	111
5.68	Transgressive operator, suspension, primitive elements	114
5.77	A-complex	118
5.82	Computation of $H(E_{\underline{\underline{h}}})$	119
5.91	Difference construction for Δ_*	123
5.98	$\hat{A}$ -complex	128
5.110	Computation of $H(W(\underline{\underline{g}}, H)_q)$	131
5.112	Remark on difference construction	132
6.	Non-trivial characteristic classes for flat bundles	133
6.1	Complex for $H(\underline{\underline{g}}, H)$	134
6.6	Computation of $H(\underline{\underline{g}}, H)$	134
6.10	Locally homogeneous flat bundles	135
6.13	Δ_* for locally homogeneous flat bundles	135

6.14	A typical application	137
6.26	$H(\underline{u}(m), 0(m))$	140
6.28	Trivial complex bundles with real structures	140
6.29	Maslov class	141
6.31	$H(\underline{gl}(m), 0(m))$	142
6.33	Flat $GL(m)$ -bundles	142
6.34	Formula for $\Delta_*(y_1)$	143
6.39	Examples with $\Delta_*(y_1) \neq 0$	146
6.45	The suspension of the Pfaffian polynomial	148
6.49	Interpretation of $\Delta_*\sigma(e)$ for isometric immersions	149
6.52	Trivial complex bundles with symplectic structures	152
7.	Examples of generalized characteristic classes for foliated bundles	153
7.0	Introduction	153
7.1	$H(W(\underline{gl}(m), 0(m))_q)$	153
7.7	Godbillon-Vey class	155
7.27	Roussaries example	160
7.29	Riemannian foliations	161
7.30	Homogeneous foliations	162
7.42	Coset foliations for reductive pairs $(\overline{G}, G)$	165
7.49	Coset foliations for non-reductive pairs	167
7.55	Coset foliation by maximal torus	168
7.59	Foliated bundles versus flat bundles	170
7.67	Homogeneous case	172

8.	Semi-simplicial Weil algebras	186
8.1	Outline	186
8.2	Semi-simplicial Weil algebras	188
8.18	Generalized Weil homomorphism	194
8.32	Application to holomorphic bundles	199
