|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| INTRODUCTION.....                                               | 1                                                                                           |
| CHAPTER 1                                                       | <i>Grothendieck topoi</i> ..... 11                                                          |
| §1                                                              | Sites and sheaves..... 11                                                                   |
| §2                                                              | The associated sheaf..... 19                                                                |
| §3                                                              | Grothendieck topoi..... 30                                                                  |
| §4                                                              | Characterization of Grothendieck topoi:<br>Giraud's theorem..... 48                         |
| Appendix to Chapter 1. Concepts of local character, examples... | 60                                                                                          |
| CHAPTER 2                                                       | <i>Interpretation of the logic <math>L_{\infty\omega}</math><br/>in categories</i> ..... 68 |
| §1                                                              | The logic $L_{\infty\omega}$ ..... 68                                                       |
| §2                                                              | Some categorical notions..... 73                                                            |
| §3                                                              | The categorical interpretation..... 78                                                      |
| §4                                                              | Expressing categorical notions by formulas:<br>the first main fact..... 82                  |
| CHAPTER 3                                                       | <i>Axioms and rules of inference valid<br/>in categories</i> ..... 96                       |
| §1                                                              | Some simple rules..... 96                                                                   |
| §2                                                              | Stability and distributivity..... 101                                                       |
| §3                                                              | Further categorical notions and their<br>expression by formulas..... 111                    |
| §4                                                              | Logical categories..... 121                                                                 |
| §5                                                              | Summary of the two main facts..... 125                                                      |
| CHAPTER 4                                                       | <i>Boolean and Heyting valued models</i> ..... 132                                          |
| §1                                                              | Heyting and Boolean valued models..... 132                                                  |
| §2                                                              | Sheaves over Heyting algebras..... 136                                                      |
| §3                                                              | Boolean homomorphisms..... 139                                                              |
| CHAPTER 5                                                       | <i>Completeness</i> ..... 143                                                               |
| §1                                                              | A Boolean-complete formalization of $L_{\infty\omega}$ ..... 144                            |
| §2                                                              | Completeness of a "one-sided" system<br>for coherent logic..... 159                         |

|                 |                                                                             |     |
|-----------------|-----------------------------------------------------------------------------|-----|
| CHAPTER 6       | <i>Existence theorems on geometric morphisms of topoi</i> .....             | 165 |
| §1              | Preliminaries.....                                                          | 165 |
| §2              | Categorical completeness theorems.....                                      | 175 |
| §3              | Intuitionistic models.....                                                  | 180 |
| CHAPTER 7       | <i>Conceptual completeness</i> .....                                        | 193 |
| §1              | A completeness property of pretopoi.....                                    | 193 |
| §2              | Infinitary generalizations; preliminaries.....                              | 204 |
| §3              | Infinitary generalizations.....                                             | 210 |
| §4              | Infinitary generalizations (continued).....                                 | 226 |
| CHAPTER 8       | <i>Theories as categories</i> .....                                         | 237 |
| §1              | Categories and algebraic logic.....                                         | 237 |
| §2              | The categorization of a coherent theory.....                                | 241 |
| §3              | Infinitary generalizations.....                                             | 251 |
| §4              | The $\kappa$ -pretopos correlated to a theory.....                          | 255 |
| CHAPTER 9       | <i>Classifying topoi</i> .....                                              | 272 |
| §1              | Classifying topoi.....                                                      | 272 |
| §2              | Coherent objects.....                                                       | 276 |
| §3              | The Zariski topos.....                                                      | 286 |
| §4              | Appendix. M. Coste's construction of the classifying topos of a theory..... | 291 |
| §5              | Appendix.....                                                               | 295 |
| REFERENCES..... |                                                                             | 298 |
