CHAPTER 0. CONVENTIONS AND NOTATION

(0.0) Maps and homotopy, and excision theorems	1
(0.1) Cofibrations and fibrations	15
(0.2) Homotopy groups	23
(0.3) Whitehead products	26
(0.4) Operation of the fundamental group	29
(0.5) Homology and cohomology groups	32

CHAPTER 1. PRINCIPAL FIBRATIONS AND COFIBRATIONS, OBSTRUCTIONS AND DIFFERENCES

(1.1) Extension and lifting problems	35
(1.2) Principal cofibrations and extension of maps and sections.....	46
(1.3) Principal fibrations and lifting of maps and retractions	68
(1.4) CW-spaces	94
(1.5) Postnikov spaces	110

CHAPTER 2. RELATIVE PRINCIPAL COFIBRATIONS AND FIBRATIONS

(2.1) Relative principal cofibrations	121
(2.2) Relative principal fibrations	131
(2.3) Postnikov decompositions, CW-decompositions, and their principal reductions	141
(2.4) The exact classification sequences of a principal cofibration	151
<u>Example:</u> Classification of maps from an n -dimen- sional Torus into the 2-sphere	159

(2.5) The exact classification sequences of a principal fibration	161
(2.6) The fiber and cofiber sequences in the category of ex-spaces	166
CHAPTER 3. ITERATED PRINCIPAL COFIBRATIONS	
(3.1) The partial suspension	171
<u>Appendix:</u> The algebra of stable and partially stable maps and the Pontrjagin algebra	177
(3.2) The classification of maps and sections by means of iterated principal cofibrations and the associated spectral sequence	183
<u>Appendix:</u> Iterated principal cofibrations and the associated chain complex	194
(3.3) The first differential of the spectral sequence, Whitehead products and relative Whitehead products	197
<u>Appendix:</u> Classification of fibrations over a suspension, twisting maps	208
(3.4) The functional suspension. Some general suspension theorems	213
(3.5) Functional suspension and the principal reduction	220
<u>Appendix:</u> The principal reduction of a CW-decomposition	228
(3.6) Examples of secondary homotopy classification, Toda brackets, triple Whitehead-products, and secondary obstructions in complex projective spaces	231

CHAPTER 4. OBSTRUCTION THEORY FOR CW-COMPLEXES

(4.1) Cohomology with local coefficients	242
<u>Appendix</u> : Examples of local groups	249
(4.2) The obstruction cocycle and the difference cochain .	254
(4.3) 2-extendability of a section. Primary cohomology obstructions	265
(4.4) The spectral sequence for the classifying maps and sections on CW-complexes	276

CHAPTER 5. POSTNIKOV HOMOTOPY DECOMPOSITIONS

(5.1) Difference fibrations	293
(5.2) Classification of fibrations with fiber an Eilenberg-Mac Lane space	298
<u>Appendix</u> : The classifying space for fibrations with fiber an Eilenberg-Mac Lane space	305
(5.3) Postnikov decompositions	306
<u>Appendix</u> : Principal approximation of $K(G, n)$ - fibrations	312
(5.4) Cohomology obstructions of higher order	315

CHAPTER 6. ITERATED PRINCIPAL FIBRATIONS

(6.1) The partial loop operation	324
<u>Appendix</u> : The algebra of stable and patially stable cohomology operations, the Steenrod algebra and the Massey- Peterson algebra	330

(6.2) Iterated principal fibrations and the derived spectral sequence for the classification of maps and retractions	334
<u>Appendix: Iterated principal fibrations and the associated chain complex</u>	340
(6.3) The first differential of the spectral sequence, cup-products and relative cup-products	342
(6.4) The functional loop operation	349
(6.5) The functional loop operation and the principal reduction of fibrations	354
<u>Appendix: The principal reduction of a Postnikov decomposition</u>	357
(6.6) Examples of secondary homotopy classification. Triple Massey products. The classification of vector bundles	358
List of symbols	368
References	370
Index	379
