

Contents

<u>Chapter I. Convex Functions</u>	1
§ 1 Convex lower semi-continuous functions. Bipolar theorem	2
§ 2 Some properties of convex sets	7
§ 3 Inf-compactness properties	12
§ 4 Infimum convolution	18
§ 5 Sub-differentiability	24
§ 6 Some examples of mutually polar functions	29
Bibliography of Chapter I	35
<u>Chapter II. Hausdorff Distance and Hausdorff Uniformity</u>	37
§ 1 The space of closed subsets of a metric space	38
§ 2 The case of a uniform space. Hausdorff uniformity	44
§ 3 The space of closed convex subsets of a locally convex space	46
§ 4 Continuity of convex multi-functions	51
Bibliography of Chapter II	56
<u>Chapter III. Measurable Multi-Functions</u>	59
§ 0 Prerequisites	60
§ 1 Measurable multi-functions, with values in compact subsets of a metrizable separable space	62
§ 2 Selection theorem. Measurable multi-functions with values in complete subsets of a separable metric space	65
§ 3 Measurable compact convex multi-functions	70
§ 4 Projection theorem. Von Neumann - Aumann's selection theorem.	72
§ 5 Measurability in Suslin locally convex spaces	81
§ 6 Implicit function theorem. Stability properties of measurable multi-functions	85
Bibliography of Chapter III	89

<u>Chapter IV. Topological Property of the Profile of a Measurable</u>	
<u>Multifunction with Compact Convex Values</u>	91
§ 1 The main theorem and its corollaries	91
§ 2 Applications. Parametric version of Caratheodory's theorem. Parametric version of Choquet's theorem	100
§ 3 Characterization of the profile of a convex set of measurable selections	107
§ 4 Extension of Ljapunov's theorem	112
Bibliography of Chapter IV	121
<u>Chapter V. Compactness Theorems of Measurable Selections and</u>	
<u>Integral Representation Theorem</u>	125
§ 1 Compactness theorems in the spaces $L_{E_S}^\infty(\Omega, \mathcal{A}, \mu)$ and $L_E^1(\Omega, \mathcal{A}, \mu)$.	125
§ 2 Inf-compactness theorems	131
§ 3 Extreme points of certain convex sets of measurable functions defined by unilateral integral constraints	140
§ 4 Compactness theorem in generalized Köthe functions spaces and its applications	142
§ 5 Integral representation theorem of multifunctions from a Köthe space to a locally convex Suslin space	151
§ 6 Characterization of a class of absolutely p summing operators	156
§ 7 Closure theorem of the set of measurable selections of a measurable multifunction	159
Bibliography of Chapter V	160
<u>Chapter VI. Primitive of Multifunctions and Multivalued</u>	
<u>Differential Equations</u>	163
§ 1 Primitive of multifunction	163
§ 2 Derivation of multifunction of bounded variation	167
§ 3 Closure theorem involving the compactness property of trajectories of multivalued differential equations	170
§ 4 Existence theorem of multivalued differential equations	174
§ 5 Selection theorem for a separately measurable and separately absolutely continuous multifunction	187
Bibliography of Chapter VI	193

Chapter VII. Convex Integrands on Locally Convex Spaces.

<u>Applications</u>	195
§ 1 Preliminary results of measurability	195
§ 2 Duality theorem of convex integral functionals for locally convex Suslin spaces	199
§ 3 Duality theorem of convex integral functionals for non-separable reflexive Banach space	203
§ 4 Applications of the duality theorem of convex integral functionals	215
Bibliography of Chapter VII	227

Chapter VIII. A Natural Supplement of L^1 in the Dual of L^∞ .

<u>Applications</u>	231
§ 1 Singular linear functionals on L^∞_E . Statement of the main theorem	232
§ 2 Representation of $L^\infty_{\mathbb{R}}$. Stonian spaces	241
§ 3 First proof of the main theorem when $E = \mathbb{R}$ and μ bounded ..	245
§ 4 Second proof of the main theorem when $E = \mathbb{R}$ and μ bounded .	246
§ 5 Proof of the main theorem when μ is bounded	249
§ 6 Proof of the main theorem	252
§ 7 Polar of a convex function on L^∞	253
§ 8 Conditional expectation of a random vector	255
§ 9 Conditional expectations of integrands and random sets	258
Bibliography of Chapter VIII	273
Subject Index	277
