

CONTENTS

I. PRELIMINARIES	1
1. Terminology and Examples	1
2. Markov Processes and the Smolukowski Equation	19
3. Auxiliary Definitions	25
II. DIFFUSION PROCESSES	31
1. Kinetic Equations	31
2. Diffusion Equations	38
3. The Stationary Case	43
4. The Wiener Process	51
III. THE FIRST PASSAGE TIME PROBLEM	61
1. Schrödinger Equation	61
2. Siegert's Method	66
3. Siegert's Moment Relation	70
IV. DISCRETE MODELS	73
1. Random Walks	73
2. Other Limits of Random Walks	81
3. Extinction and Absorption	85
4. Growth and Extinction in a Random Environment	98
5. Feller's Diffusion Equation	113
6. Diffusion Models for Neuronal Activity	118

V. CONTINUOUS MODELS	148
1. Stochastic Differential Equations	148
2. The White Noise	151
3. Special Cases and Examples	163
4. Transformations to the Wiener Process	176
5. Transformations to the Feller Process	180
 Bibliography	 189
Author Index	195
Subject Index	197
