

<u>Introduction</u>	1
<u>Chapter I. Functional Analytic Preliminaries</u>	3
1. General Operator Theory	3
2. Symmetric Operators	4
<u>Chapter II. Linear Differential Operators and the General Classification Theory of Deficiency Indices.</u>	6
1. Symmetric Differential Expressions	6
2. Deficiency Indices	7
3. Differential Operators	10
4. General Deficiency Indices	16
5. The General Limit Point Condition	18
6. Notes and Comments	20
<u>Chapter III. Second Order Limit-Point, Limit-Circle Conditions</u>	22
1. The General Second Order Theory	22
2. Limit-Point Criteria	23
3. The Limit-Circle Case	31
4. Oscillation and the Limit-Point Classification	33
5. Notes and Comments	38
<u>Chapter IV. Higher Order Limit-Point Criteria.</u>	41
1. Introduction	41
2. The Main Results and Some Implications	41
3. Proof of Theorem 2.1	45
4. Notes and Comments	53
<u>Chapter V. The Deficiency Index Problem for Polynomials in Symmetric Differential Expressions</u>	55
1. Introduction	55
2. Minimal and Maximal Operators of Product Expressions	56
3. The Relationship between $d(M^k)$ and $d(M)$	63
4. The Limit-Circle Case for Powers	67

5. Examples	69
6. Notes and Comments	78
<u>Chapter VI. Applications of Perturbation Theory</u>	79
1. Introduction	79
2. Polynomials in a Symmetric Expression	79
3. The Rule	85
4. Notes and Comments	88
<u>Chapter VII. Conditions on the Coefficients for all Powers to be Limit-Point</u>	89
1. Introduction	89
2. Sufficient Conditions for M^k to be Limit-Point	89
3. Notes and Comments	97
