

CONTENTS

Preface

Chapter I.	<u>Four Famous Problems</u>	1
	1. A Problem in Real Analysis	1
	2. A Problem in Algebra	2
	3. A Problem in General Topology	5
	4. A Problem in Set Theory	6
Chapter II.	<u>What is Set Theory?</u>	11
	1. Set Theory as a Framework for Mathematics	11
	2. Set Theory Under the Microscope	13
	3. A Language for Set Theory	14
	4. The Set-Theoretic Hierarchy	18
	5. The Axiom of Choice	25
Chapter III.	<u>The Axiom of Constructibility</u>	27
	1. The Constructible Hierarchy	28
	2. The Axiom of Constructibility	30
	3. The Generalised Continuum Hypothesis	33
	4. Historical Remarks	34
Chapter IV.	<u>Applications of $V=L$ in Mathematics</u>	36
	1. Combinatorial Principles from $V=L$	36
	2. The Souslin Problem	39
	3. The Whitehead Problem	44
	4. Collectionwise Hausdorff Spaces	58
	5. Further Remarks	64

Chapter V	<u>A Problem in Measure Theory</u>	65
	1. Extensions of Lebesgue Measure	65
	2. The Measure Problem	66
	3. A Theorem in Model Theory	72
	4. The Condensation Lemma	76
	5. Solution to the Measure Problem	78
	6. Historical Remark	80
Appendix I	<u>Axioms for Set Theory</u>	81
Appendix II	<u>Independence Proofs in Set Theory</u>	86
Glossary of Key Terms		92
Special Symbols		94
Suggested Further Reading		96
