List of Figures	III
1. Introduction	1
2. Mathematical Preliminaries	9
2.1. Vector Fields, Differential Forms, Flow-box- and Frobenius Theorem . . .	9
2.2. Maps between Manifolds	13
2.2.1. Diffeomorphism	14
2.2.2. Submersion	14
2.3. Functional Dependence	18
3. Geometric Representation and Flatness of Dynamical Systems	21
3.1. Geometric Representation of Continuous-time Systems	22
3.2. Geometric Representation of Discrete-time Systems	23
3.3. Flatness of Continuous-time Systems	25
3.3.1. Notion of Continuous-time Flatness	25
3.3.2. Geometric Definition of Continuous-time Flatness	26
3.4. Flatness of Discrete-time Systems	27
3.4.1. Notion of Discrete-time Flatness	27
3.4.2. Geometric Definition of Discrete-time Flatness	29
3.5. Concluding Remarks	35
4. Analysis of Discrete-time Flat Systems	37
4.1. Generalization of the Test for Static Feedback Linearizability	37
4.2. Explicit Triangular Representations for Discrete-time Forward-Flat Systems	42
4.2.1. Explicit Triangular Form	42
4.2.2. Explicit Triangular Form for Two-input Flat Systems	45
4.2.3. Structurally Flat Explicit Triangular Form for Two-Input Flat Systems	49
4.2.4. Example	50
4.3. Implicit Triangular Representations for Discrete-time Flat Systems . . .	53
5. Discretization and Flatness-based Controller Design	57
5.1. Discretization of Continuous-time Systems	57
5.1.1. Exact Discretization and Approximate Discretization Methods .	58
5.1.2. Flatness-preserving Explicit Euler-discretization	66
5.1.3. Flatness-preserving Implicit Euler-discretization	69
5.2. Trajectory Planning and Feedforward Control	72

5.3. Flatness-based Tracking Controller Design	75
5.3.1. Controller Design based on Dynamic Feedback Linearization . . .	75
5.3.2. Controller Design based on Quasi-static Feedback Linearization .	79
5.3.3. Extension of the Tracking Error Dynamics by Integral Parts . . .	82
6. Practical Examples	83
6.1. Discrete-time Flatness-based Control of a Gantry Crane	83
6.1.1. Controller Design for the Sampled-data Model of a Gantry Crane	85
6.1.2. Trajectory Planning and Measurement Results	87
6.2. Discrete-time Flatness-based Control of a VTOL Aircraft	95
6.2.1. Controller Design for the Sampled-data Model of a VTOL Aircraft	97
6.2.2. Simulation Results	99
6.3. Flatness Analysis for the Euler-discretization of a Single Mast Stacker Crane	99
6.3.1. Flat Model of a Single Mast Stacker Crane	100
6.3.2. Flat Sampled-data Model of a Single Mast Stacker Crane	103
6.3.3. Trajectory Planning and Feedforward Control	106
7. Conclusion and Future Issues	109
A. Appendix	111
A.1. Checking Forward-flatness for the Explicit Euler-discretization of a Gantry Crane	111
A.2. Checking Forward-flatness for the Explicit Euler-discretization of a planar VTOL Aircraft	112
A.3. Checking Forward-flatness for the Explicit Euler-discretization of a Single Mast Stacker Crane	114
A.4. Proof of Lemma 6.1	115
Bibliography	117
