

Table of Contents

<u>Chapter I.</u>	Structure of nilpotent Lie algebras and Lie groups	1
§ 1.	Derivations and automorphisms of filtered polynomial rings	
1.1	Dilations and gradations	1
1.2	Homogeneous norms	3
1.3	Vector fields with polynomial coefficients.....	4
1.4	Locally unipotent automorphisms	8
1.5	Transformation groups	10
1.6	Finite dimensional representations	10
1.7	Examples	11
§ 2.	Birkhoff embedding theorem	
2.1	Filtrations on nilpotent Lie algebras	12
2.2	Algebraic comparison of additive and nilpotent group structures ..	13
2.3	Faithful unipotent representations	16
§ 3.	Comparison of group structures	
3.1	Norm comparison of additive and nilpotent structures	17
3.2	Algebraic comparison of filtered and graded structures	19
3.3	Norm comparison of filtered and graded structures	27
Comments and references for Chapter I		31
<u>Chapter II.</u>	Nilpotent Lie algebras as tangent spaces	33
§ 1.	Transitive Lie algebras of vector fields	
1.1	Geometric background	33
1.2	Partial homomorphisms	35
1.3	Lifting theorem	38
§ 2.	Proof of the Lifting Theorem	
2.1	Basic Lie formulae	40
2.2	Left-invariant vector fields	42
2.3	Formal solution	43
2.4	C^∞ solution	46

§ 3. Group germs generated by partial isomorphisms	
3.1 Exponential coordinates	49
3.2 Comparison of group germs	50
§ 4. Examples from complex analysis	
4.1 Real hypersurfaces in $\mathbb{C}^{n+1}$	53
4.2 Points of type m	55
4.3 Geometric characterisation	57
4.4 Siegel domains and the Heisenberg group	61
Comments and references for Chapter II	65
<u>Chapter III.</u> Singular integrals on spaces of homogeneous type	67
§ 1. Analysis on vector spaces with dilations	
1.1 Homogeneous functions and distributions	67
1.2 Integral formulas	70
§ 2. Spaces of homogeneous type	
2.1 Distance functions	71
2.2 Homogeneous measures	74
2.3 Lipschitz spaces	77
§ 3. Singular integral operators	
3.1 Singular kernels	78
3.2 Operators defined by singular kernels	82
§ 4. Boundedness of singular integral operators	
4.1 Almost orthogonal decompositions	85
4.2 Decompositions of singular integrals	87
4.3 L_p boundedness ($1 < p < \infty$)	95
§ 5. Examples	
5.1 Graded nilpotent groups	96
5.2 Filtered nilpotent groups	99
5.3 Group germs	101
5.4 Boundedness on Sobolev spaces	108

Comments and references for Chapter III	114
<u>Chapter IV.</u> Applications	117
§ 1. Intertwining Operators	
1.1 Bruhat decomposition and integral formulas	118
1.2 Principal series	121
1.3 Intertwining operators	124
1.4 Boundedness of intertwining operators	128
1.5 Examples	134
§ 2. Boundary values of H^2 functions	
2.1 Harmonic analysis on the Heisenberg group	138
2.2 Tangential Cauchy-Riemann equations	142
2.3 Projection onto $H^2_b(G)$ as a singular integral operator	146
2.4 Szegő kernel for $H^2(D)$	151
§ 3. Hypoelliptic differential operators	
3.1 Fundamental solutions for homogeneous hypoelliptic operators	158
3.2 Principal parts of differential operators	163
3.3 Construction of a parametrix	166
3.4 Local regularity	167
Comments and references for Chapter IV	173
<u>Appendix:</u> Generalized Jonquières Groups	175
A.1 Root space decomposition of $\text{Der}(P)$	176
A.2 Maximal finite-dimensional subalgebras	180
A.3 Structure of $\underline{m}$	185
A.4 Birational transformations	192
Comments and references for Appendix	201
Bibliography	202
Subject index	210
