

TABLE OF CONTENTS

I. Introduction	1
II. Alternative problems : an historical perspective	4
III. Coincidence degree for perturbations of Fredholm mappings	10
IV. A generalized continuation theorem and existence theorems for $Lx \approx Nx$	26
V. Two-point boundary value problems : nonlinearities without special structure	36
VI. Approximation of solutions - The projection method	104
VII. Quasibounded perturbations of Fredholm mappings	134
VIII. Boundary value problems for some semilinear elliptic partial differential equations	151
IX. Periodic solutions of ordinary differential equations with quasibounded nonlinearities and of functional differential equations	166
X. Coincidence index, multiplicity and bifurcation theory	189
XI. Coincidence degree for k-set contractive perturbations of linear Fredholm mappings	209
XII. Nonlinear perturbations of Fredholm mappings of nonzero index	229
References	242
