

Contents

1. Introduction	1
1.1 Doppler Broadening of Optical Spectral Lines	1
1.2 Methods of Linear Optical Spectroscopy Without Doppler Broadening	4
1.3 Saturation Laser Spectroscopy	12
1.4 Two-Photon Laser Spectroscopy	29
1.5 Problem of Very Narrow Optical Resonances	31
References	34
2. Elements of the Theory of Resonant Interaction of a Laser Field and Gas	37
2.1 Schrödinger Equation--Transition Probabilities	37
2.2 Density-Matrix Equation	46
2.3 Polarization and Level Populations. Rate Equations	51
2.4 Absorption Coefficient of Running Wave	54
2.5 Absorption Saturation by Standing Wave	58
2.5.1 Weak Saturation. Lamb Dip	58
2.5.2 Strong Saturation. Level-Population Effects	60
2.5.3 Coherence and Nonuniformity of Standing-Wave Field Effects	66
2.6 Strong and Weak Counter-Running Waves	72
2.6.1 Level-Population Effects	73
2.6.2 Coherence Effects	74
2.7 Unidirectional Weak and Strong Waves	80
2.8 Stark Effect in a Light Field at Doppler-Broadened Transitions	83
References	85
3. Narrow Saturation Resonances on Doppler-Broadened Transition	87
3.1 Resonance Effects in a Single-Mode Laser with Saturated Absorption	87
3.1.1 Equations of Single-Mode Laser	88

3.1.2	Output Power	90
3.1.3	Frequency and Spectrum	105
3.2	Resonances in Absorption Saturation by Independent Waves	113
3.2.1	Probe Counter-Laser-Wave Method	117
3.2.2	Counter Laser Waves of Different Frequencies	122
3.2.3	Laser Waves with Different Polarization	123
3.2.4	Spatially Separated Laser Waves	125
3.3	Density Resonance of Excited Particles	133
3.3.1	Resonances in Two-Level Atom and Rotational-Vibrational Molecular Transitions	133
3.3.2	Fluorescence-Cell Method and Connected Methods	138
3.4	Resonance Effects at Mode Interaction	141
3.4.1	Interaction of Two Axial Modes	142
3.4.2	Interaction of Two Counter-Running Waves in a Ring Laser	146
	References	151
4.	<i>Narrow Resonances of Two-Photon Transitions Without Doppler Broadening</i>	155
4.1	Two-Photon Absorption	156
4.1.1	Transition Probability and Selection Rules	157
4.1.2	Two-Photon Resonance Shape for Gas in Counter-Running Light Waves	163
4.1.3	Power Shift and Power Broadening of Two-Photon Resonances	169
4.1.4	Two-Photon Resonances at Atomic Transitions	174
4.1.5	Two-Photon Resonances on Molecular Transitions	176
4.2	Raman Scattering in Gases Without Doppler Broadening	177
4.3	Spectral Shape of Resonance Fluorescence	179
