|                                                         |     |
|---------------------------------------------------------|-----|
| 1. "Abstract Families and the Adjoint Functor Theorems" |     |
| by Robert Paré and Dietmar Schumacher                   | 1   |
| O Introduction . . . . .                                | 1   |
| I Abstract Families . . . . .                           | 6   |
| II Smallness . . . . .                                  | 22  |
| III Limits . . . . .                                    | 61  |
| IV The Adjoint Functor Theorems . . . . .               | 94  |
| V Applications . . . . .                                | 108 |
| References . . . . .                                    | 124 |
| 2. " <u>V</u> -Indexed Categories"                      |     |
| by Richard J. Wood . . . . .                            | 126 |
| References . . . . .                                    | 140 |
| 3. "Algebraic Theories in Toposes"                      |     |
| by Peter Johnstone and Gavin Wraith                     | 141 |
| Introduction . . . . .                                  | 141 |
| I Internal Categories and Profunctors . . . . .         | 148 |
| II Natural Number Objects . . . . .                     | 158 |
| III Recursion for Profunctors . . . . .                 | 165 |
| IV The Object Classifier . . . . .                      | 175 |
| V Finitary Algebraic Theories . . . . .                 | 190 |
| VI Many-Sorted Theories . . . . .                       | 215 |
| VII Finitary and Infinitary Theories . . . . .          | 227 |
| References . . . . .                                    | 240 |
| 4. "Coequalizers in Algebras for an Internal Type"      |     |
| by Robert D. Rosebrugh . . . . .                        | 243 |
| References . . . . .                                    | 259 |
