

Contents

CHAPTER I	
Preliminaries	1
I.1 Gaussian Probability Distribution in a Euclidean Space	1
I.2 Gaussian Random Functions with Prescribed Probability Measure	2
I.3 Lemmas on the Convergence of Gaussian Variables	5
I.4 Gaussian Variables in a Hilbert Space	7
I.5 Conditional Probability Distributions and Conditional Expectations	13
I.6 Gaussian Stationary Processes and the Spectral Representation	16
CHAPTER II	
The Structures of the Spaces $H(T)$ and $L_T(F)$	28
II.1 Preliminaries	28
II.2 The Spaces $L^+(F)$ and $L^-(F)$	35
II.3 The Construction of Spaces $L_T(F)$ When T Is a Finite Interval	38
II.4 The Projection of $L^+(F)$ on $L^-(F)$	45
II.5 The Structure of the σ -algebra of Events $\mathfrak{I}(T)$	55
CHAPTER III	
Equivalent Gaussian Distributions and their Densities	63
III.1 Preliminaries	63
III.2 Some Conditions for Gaussian Measures to be Equivalent	74
III.3 General Conditions for Equivalence and Formulas for Density of Equivalent Distributions	85
III.4 Further Investigation of Equivalence Conditions	90
	ix

CHAPTER IV	
Conditions for Regularity of Stationary Random Processes	108
IV.1 Preliminaries	108
IV.2 Regularity Conditions and Operators B_t	114
IV.3 Conditions for Information Regularity	125
IV.4 Conditions for Absolute Regularity and Processes with Discrete Time	129
IV.5 Conditions for Absolute Regularity and Processes with Continuous Time	138
CHAPTER V	
Complete Regularity and Processes with Discrete Time	144
V.1 Definitions and Preliminary Constructions with Examples	144
V.2 The First Method of Study: Helson—Sarason's Theorem	147
V.3 The Second Method of Study: Local Conditions	153
V.4 Local Conditions (continued)	163
V.5 Corollaries to the Basic Theorems with Examples	177
V.6 Intensive Mixing	181
CHAPTER VI	
Complete Regularity and Processes with Continuous Time	191
VI.1 Introduction	191
VI.2 The Investigation of a Particular Function $\gamma(T; \mu)$	195
VI.3 The Proof of the Basic Theorem on Necessity	200
VI.4 The Behavior of the Spectral Density on the Entire Line	207
VI.5 Sufficiency	212
VI.6 A Special Class of Stationary Processes	217
CHAPTER VII	
Filtering and Estimation of the Mean	224
VII.1 Unbiased Estimates	224
VII.2 Estimation of the Mean Value and the Method of Least Squares	237
VII.3 Consistent Pseudo-Best Estimates	244
VII.4 Estimation of Regression Coefficients	251
References	274
