=====

GAUGE GROUPS. ELEMENTARY PARTICLES.

* Hooft G. 't :	Magnetic monopoles and non-Abelian gauge groups	3
* Iliopoulos I.:	Gauge theories	4
* O'Raifeartaigh L.:	Present status of supersymmetry	11
Balachandran A.P., Ramachandran R., Schechter J., Kameshwar C.Wali,	Rupertsberger H.: Monopole theories with strings and their applications to meson states	24
Buccella F., Sciarrino A., Sorba P.:	Quarks and the Poincaré group: $SU(6) \times SU(3)$	29
Drechsler W.:	Wave equations for extended hadrons	37
Giovannini N.:	Covariance principle and covariance group in presence of external e.m. fields	53
Hongoh M.	Dynamical $SU(3)$ model for strong interactions and γ particles	61
Hoogland H.:	Local and global equivalence of projective representations	72
Kerner R.:	Invariant equations on the fibre bundles	80
Strocchi F.:	Gauge groups in local field theory and superselection rules	87

GEOMETRIC QUANTIZATION

* Joseph A.:	The algebraic method in representation theory	95
* Kostant B.:	Geometric quantization and graded Lie algebras	110
* Simms D.:	A survey of the applications of geometric quantization	111
* Souriau J.M.:	Construction explicite de l'indice de Maslov. Applications	117
* Woodhouse N.:	Twistor theory and geometric quantization	149
Bloore F.J., Assimakopoulos M.:	Quantization as deformation theory	164
Drühl K.:	Relativistic canonical systems: a geometric approach to their space-time structure and symmetries	172
Hurt N.E.:	Propagators in quantum mechanics on multiply connected spaces	182
Onofri E.:	On the quantization of the Kepler manifold	193
Śniatycki J.:	On wave functions in geometric quantization	194

Tripathy K.C.:	Dynamical prequantization, spectrum-generating algebras and the classical Kepler and harmonic oscillator problems	199
Underhill J., Taraviras S.:	Weyl quantization on a sphere	210
Wolf J.A.:	Conformal group, quantization, and the Kepler problem	217

BROKEN SYMMETRIES

* Gürsey F.:	Exceptional groups and elementary particles	225
* Michel L.:	A propos des brisures spontanées de symétrie	234

COHERENT STATES

* Bacry H., Grossmann A., Zak J.:	Geometry of generalized coherent states	249
* Rocca F.:	Coherent states for boson systems in quantum field theory and statistical mechanics	269
Boon M.:	Coherent states and Pippard networks	282

ATOMIC, MOLECULAR, NUCLEAR, SOLID STATE PHYSICS

* Dreizler R.M.:	The algebraic approach to nuclear structure problems	291
* Judd B.R.:	Lie groups and the Jahn-Teller effect for a color center	312
* Quesne C.:	Symmetries and statistics in nuclear physics	322
Božović I.B., Vujičić M., Herbut F.:	Group theory in polymer physics	330
Butzal H.D.:	Group theoretical approach to Bloch electrons in antiferromagnets	336
Chacón E., Moshinsky M., Sharp R.T.:	$U(5) \supset O(5) \supset O(3)$ and the exact solution for the problem of quadrupole vibrations of the nucleus	337
Cracknell A.P., Davies B.L.:	Wave vector selection rules for space groups	338
Fritzer H.:	A chemist looks at the structure of symmetry groups	348
John G., Kramer P.:	Canonical transformations and Gaussian integral kernels in nuclear physics	357
Kasperkovitz P.:	Crystals as dynamical systems: a new class of models	365
Moshinsky M., Mello P.A.:	Nonlinear canonical transformations and their representations in quantum mechanics	374

Roël R.W.J.:	Invariance groups of Young operators; Pauling numbers	376
Seligman T.H.:	Applications of group theory to nuclear reactions: a critical survey	386

MATHEMATICAL PHYSICS

* Biedenharn L.C., Lohe M.A., Louck J.D.:	The canonical resolution of the multiplicity problem for $U(3)$: an explicit and complete constructive solution	395
* Zassenhaus H., Plesken W.:	On space-time groups	404
Backhouse N.:	Frame's conjugating representation and group extensions	420
Boyer C.P.:	Symmetries of differential equations in mathematical physics	425
Broek P. van den:	On the determination of factor systems of PUA- representations	435
Brunet M., Kramer P.:	Complex extension of the representation of the symplectic group associated with the canonical commutation relations	441
Cattaneo U.:	Continuous unitary projective representations of Polish groups: the BMS-group	450
Dirl R.:	The Hilbert space $L^2(SU(2))$ as a representation space for the group $(SU(2) \times SU(2)) \otimes S_2$	461
Giovannini N.:	Induction from a normal nilpotent subgroup	471
King R.C.:	Spinor representations Weight multiplicities for the classical groups	481 490
Patera J., Sharp R.T., Winternitz P., Zassenhaus H.:	Casimir operators of subalgebras of the Poincaré Lie algebra and of real Lie algebras of low dimension	500
Perroud M.:	The maximal solvable subalgebras of the real classical Lie algebras	516
Pommaret J.F.:	Physics and deformation theory of finite Lie algebras. Why do all physical laws present the same features?	523
Shaw R.:	Wigner 3j-symbols and the Lorentz group	537

CLASSICAL MECHANICS, QUANTUM MECHANICS, FIELD THEORY, STATISTICAL MECHANICS

Bracci L., Morchio G., Strocchi F.: Description of symmetries in indefinite metric spaces	551
Cronström C.: Partial diagonalization of Bethe-Salpeter type equations	557
Hintermann A., Gruber C.: Group structure for classical lattice systems of arbitrary spin	558
Marmo G.: Equivalent Lagrangians and quasicanonical transfor- mations	568
Niederer U.H.: Group theory of massless boson fields	573
Onofri E.: Some considerations about Nelson's derivation of Schrödinger equation	582
Perrin M.J.: The "Galilean" components of a position operator for the photon	586
Rieckers A.: Group theoretic aspects of Gibbs space	595
Rosen J.: Approximate symmetry	608
Scheurer P.B.: Cohomology of the action differential forms	609
Vuillermot P.A., Kunz H., Pfister Ch.Ed.: Correlation inequalities in a class of lattice systems in statistical mechanics	614

EDUCATIONAL

Lévy-Leblond J.M.: What is so "special" about "relativity"?	617
