

Contents

<i>Part I Production and Accumulation of Organic Matter: A Geological Perspective</i>	
<i>Chapter 1 Production and Accumulation of Organic Matter. The Organic Carbon Cycle</i>	3
1.1. Photosynthesis – The Basis for Mass Production of Organic Matter	3
1.2. The Organic Carbon Budget During the History of the Earth	7
1.3. The Organic Carbon Budget in the Black Sea	11
Summary and Conclusion	13
<i>Chapter 2 Evolution of the Biosphere</i>	14
2.1. Phytoplankton and Bacteria	14
2.2. Higher Plants	17
2.3. Geological History of the Biosphere	19
Summary and Conclusion	20
<i>Chapter 3 Biological Productivity of Modern Aquatic Environments</i>	21
3.1. Primary Producers of Organic Matter	21
3.2. Factors Influencing Primary Productivity	23
3.3. Present Primary Production of the Oceans	28
Summary and Conclusion	30
<i>Chapter 4 Chemical Composition of the Biomass: Bacteria, Phytoplankton, Zooplankton, Higher Plants . . .</i>	31
4.1. Proteins and Carbohydrates	31
4.2. Lipids	34
4.3. Lignin and Tannin	44
4.4. Qualitative and Quantitative Occurrence of Important Chemical Constituents in Bacteria, Phytoplankton, Zooplankton and Higher Plants	45
4.5. Natural Associations and Their Effects on Biomass Composition	50
Summary and Conclusion	53

<i>Chapter 5 Sedimentary Processes and the Accumulation of Organic Matter</i>	55
5.1 Fossil and Modern Sediments Rich in Organic Matter, and Their Geological Implication	55
5.2 The Role of Dissolved and Particulate Organic Matter	57
5.3 Accumulation Mechanisms for Sedimentary Organic Matter	59
Summary and Conclusion	61
References	63

Part II The Fate of Organic Matter in Sedimentary Basins: Generation of Oil and Gas

<i>Chapter 1 Diagenesis, Catagenesis and Metagenesis of Organic Matter</i>	69
1.1 Diagenesis	69
1.2 Catagenesis	71
1.3 Metagenesis and Metamorphism	72
Summary and Conclusion	73

<i>Chapter 2 Early Transformation of Organic Matter: The Diagenetic Pathway from Organisms to Geochemical Fossils and Kerogen</i>	74
2.1 Significance and Main Steps of Early Transformations	74
2.2 Biochemical Degradation	75
2.3 Polycondensation	81
2.4 Insolubilization	84
2.5 Isotopic Composition of Organic Matter in Young Sediments	88
2.6 Result and Balance of Diagenesis	89
Summary and Conclusion	91

<i>Chapter 3 Geochemical Fossils and Their Significance in Petroleum Formation</i>	92
3.1 Diagenesis Versus Catagenesis: Two Different Sources of Hydrocarbons in the Subsurface	92
3.2 Hydrocarbons Inherited from Living Organisms, Directly or Through an Early Diagenesis: Geochemical Fossils	97
3.3 <i>n</i> -Alkanes	99
3.4 Iso- and Anteiso-Alkanes	109
3.5 C ₁₀ -branched Alkanes	109

Contents	XIII
3.6 Acyclic Isoprenoids	110
3.7 Tricyclic Diterpenoids	113
3.8 Steroids and Pentacyclic Triterpenoids: Occurrence in Recent and Ancient Sediments	114
3.9 Fate of Steroids and Triterpenoids During Diagenesis .	116
3.10 Other Polyterpenes	119
3.11 Aromatics	119
3.12 Oxygen and Nitrogen Compounds	120
3.13 Kerogen as a Possible Source of Fossil Molecules . . .	122
Summary and Conclusion	122
<i>Chapter 4 Kerogen: Composition and Classification</i>	123
4.1 Definition and Importance of Kerogen	123
4.2 Isolation of Kerogen	124
4.3 Microscopic Constituents of Kerogen	125
4.4 Chemical and Physical Determination of Kerogen Structure	131
4.5 Chemical Analysis	131
4.6 Physical Analysis	134
4.7 General Structure of Kerogen	138
4.8 Depositional Environment and Composition of Kerogen: the Evolution Paths	142
4.9 Conclusion	147
Summary and Conclusion	147
<i>Chapter 5 From Kerogen to Petroleum</i>	148
5.1 Diagenesis, Catagenesis and Metagenesis of Kerogen .	148
5.2 Experimental Simulation of Kerogen Evolution	157
5.3 Structural Evolution of Kerogen	162
5.4 Formation of Hydrocarbons During Catagenesis . . .	164
5.5 Carbon Isotope Fractionation and Kerogen Evolution	177
5.6 Experimental Generation of Hydrocarbons from Organic Material	179
Summary and Conclusion	184
<i>Chapter 6 Formation of Petroleum in Relation to Geological Processes. Timing of Oil and Gas Generation . . .</i>	185
6.1 General Scheme of Petroleum Formation	185
6.2 Formation of Gas	188
6.3 Genetic Potential and Transformation Ratio	190
6.4 Nature of the Organic Matter. Gas Provinces Versus Oil Provinces	191
6.5 Temperature, Time and Pressure	194

6.6	Timing of Oil and Gas Generation	196
6.7	Comparison Between the Time of Source Rock Deposition and the Time of Petroleum Generation . .	198
	Summary and Conclusion	200

Chapter 7 Coal and its Relation to Oil and Gas 202

7.1	General Aspects of Coal Formation	202
7.2	The Formation of Peat	203
7.3	Coalification Process	207
7.4	Coal Petrography	213
7.5	Petroleum Generation	217
	Summary and Conclusion	224

Chapter 8 Oil Shales: A Kerogen-Rich Sediment with Potential Economic Value 225

8.1	Historical	225
8.2	Definition of Oil Shales. Oil Shale Versus Petroleum Source Rock	225
8.3	Composition of Organic Matter	227
8.4	Conditions of Deposition	229
8.5	Oil Shale Density	230
8.6	Pyrolysis of Oil Shales	230
8.7	Oil Yield; Composition of Shale Oil	231
8.8	Oil Shale Distributions and Reserves	234
	Summary and Conclusion	236

References 237

Part III The Migration and Accumulation of Oil and Gas

Chapter 1 An Introduction to Migration and Accumulation of Oil and Gas 257

Summary and Conclusion	259
----------------------------------	-----

Chapter 2 Physicochemical Aspects of Primary Migration . 260

2.1	Temperature and Pressure	260
2.2	Compaction	264
2.3	Fluids	271
2.4	Possible Modes of Primary Migration	272
	Summary and Conclusion	283

<i>Chapter 3 Geological and Geochemical Aspects of Primary Migration</i>	285
3.1 Time and Depth of Primary Migration	285
3.2 Changes in Composition of Source Rock Bitumen Versus Crude Oil	290
3.3 Evaluation of Geological and Geochemical Aspects of Primary Migration	291
3.4 Preliminary Conclusions and Suggestions on Primary Migration	296
Summary and Conclusion	297
 <i>Chapter 4 Secondary Migration and Accumulation</i>	299
4.1 The Buoyant Rise of Oil and Gas Versus Capillary Pressures	300
4.2 Hydrodynamics and Secondary Migration	302
4.3 Geological and Geochemical Implications of Secondary Migration	305
4.4 Termination of Secondary Migration and Accumulation of Oil and Gas	309
4.5 Distances of Secondary Migration	312
Summary and Conclusion	314
 <i>Chapter 5 Reservoir Rocks and Traps, the Sites of Oil and Gas Pools</i>	315
5.1 Reservoir Rocks	316
5.2 Traps	318
Summary and Conclusion	323
References	324

Part IV The Composition and Classification of Crude Oils and the Influence of Geological Factors

<i>Chapter 1 Composition of Crude Oils</i>	333
1.1 Petroleum Versus Source Rock Bitumen	333
1.2 Analytical Procedures for Crude Oil Characterization	333
1.3 Main Groups of Compounds in Crude Oils	337
1.4 Principal Types of Hydrocarbons in Crude Oils	340
1.5 Sulfur Compounds	356

1.6	Nitrogen Compounds	359
1.7	Oxygen Compounds	360
1.8	High Molecular Weight N, S, O Compounds	361
1.9	Organometallic Compounds	363
1.10	Covariance Analysis of Main Crude Oil Constituents	365
	Summary and Conclusion	368
 <i>Chapter 2 Classification of Crude Oils</i>		 369
2.1	General	369
2.2	Historical	370
2.3	Basis of Proposed Classification of Crude Oils	370
2.4	Classification of Crude Oils	371
2.5	Characteristics of the Principal Classes of Crude Oils	373
2.6	Concluding Remarks	376
	Summary and Conclusion	377
 <i>Chapter 3 Geochemical Fossils in Crude Oils and Sediments as Indicators of Depositional Environment and Geological History</i>		 378
3.1	Significance of Fossil Molecules	378
3.2	Geochemical Fossils as Indicators of Geological Environments	380
3.3	Geochemical Fossils as Indicators of Diagenesis	385
3.4	Geochemical Fossils as Indicators of Catagenesis	387
3.5	Present and Future Development in the Use of Geochemical Fossils	388
	Summary and Conclusion	389
 <i>Chapter 4 Geological Control of Petroleum Type</i>		 390
4.1	General and Geochemical Regularities of Composition	390
4.2	Geochemical Regularities Related to the Environment of Deposition	391
4.3	Geochemical Regularities in Relation to Thermal Evolution	400
4.4	Concluding Remarks on Crude Oil Regularities	408
	Summary and Conclusion	408
 <i>Chapter 5 Petroleum Alteration</i>		 409
5.1	Thermal Alteration	410
5.2	Deasphalting	411

5.3 Biodegradation and Water Washing	413
Summary and Conclusion	419
References	420

*Part V A New Approach to Oil and Gas Exploration:
Application of the Principles of Petroleum
Generation and Migration*

<i>Chapter 1 Identification of Source Rocks</i>	<i>429</i>
1.1 Amount of Organic Matter	429
1.2 Type of Organic Matter	431
1.3 Maturation of the Organic Matter	449
1.4 Conclusions on Characterization of Potential Source Rocks	464
Summary and Conclusion	470
 <i>Chapter 2 Oil and Source Rock Correlation</i>	 <i>472</i>
2.1 Correlation Parameters	473
2.2 Oil-Oil Correlation Examples	475
2.3 Oil-Source Rock Correlation Examples	481
Summary and Conclusion	485
 <i>Chapter 3 Locating Petroleum Prospects: Application of Principle of Petroleum Generation and Migration</i>	 <i>487</i>
3.1 First Conceptual Model of Petroleum Generation in a Basin	488
3.2 The Optimization of Organic Geochemical Information from Exploration Wells	489
3.3 Determination of Most Favorable Zones of Petroleum Accumulation in a Basin: A Geochemical Approach for Locating Prospects	490
Summary and Conclusion	499
 <i>Chapter 4 Mathematical Models: A Quantitative Approach to the Evaluation of Oil and Gas Prospects</i>	 <i>500</i>
4.1 Necessity of a Quantitative Approach to Petroleum Potential of Sedimentary Basins	500
4.2 Mathematical Model of Kerogen Degradation and Hydrocarbon Generation	501

4.3	Genetic Potential of Source Rocks. Transformation Ratio	505
4.4	Validity of the Model	506
4.5	Significance of the Activation Energies in Relation to the Type of Organic Matter	506
4.6	Application of the Mathematical Model to Petroleum Exploration	509
4.7	Heat Flow and Geothermal Gradient	512
4.8	General Rules for Reconstitution of Ancient Geothermal Gradient	514
4.9	Evaluation of the Present Geothermal Gradient	516
4.10	Evaluation of the Ancient Geothermal Gradient	516
4.11	Conclusion	520
	Summary and Conclusion	521
	References	522
	<i>Subject Index</i>	529
