Part I Lecture Notes on Inverse Problems

1	Inverse Problems in Statistics	3
	Laurent Cavalier	
1.1	Inverse Problems	4
1.1.1	Introduction	4
1.1.2	Statistical Inverse Problems	6
1.1.3	Linear Inverse Problems with Random Noise	7
1.1.4	Basic Notions on Operator Theory	9
1.1.5	Singular Value Decomposition and Sequence Space Model	13
1.1.6	Examples	16
1.1.7	Spectral Theory	23
1.2	Nonparametric Estimation	27
1.2.1	Minimax Approach	28
1.2.2	Regularization Methods	29
1.2.3	Classes of Functions	38
1.2.4	Rates of Convergence	42
1.2.5	Comparison Between Deterministic and Stochastic Noise	48
1.3	Adaptation and Oracle Inequalities	53
1.3.1	Minimax Adaptive Procedures	53
1.3.2	Oracle Inequalities	55
1.3.3	Model Selection	57
1.3.4	Universal Optimality	75
1.4	Conclusion	84
1.4.1	Summary	84
1.4.2	Discussion	86
1.4.3	Open Problems	87
	References	92

Part II Invited Contribution on Inverse Problems

2	Non-parametric Models with Instrumental Variables	99
	Jean-Pierre Florens	
2.1	Introduction	99
2.2	The Linear Model: Vectorial or Functional Data	102
2.3	The Additively Separable Model and Its Extensions	106
2.4	The Non-separable Models	111
2.5	Some Extensions to Dynamic Models	113
2.6	Conclusion	115
	References	116

Part III Lecture Notes on High-Dimensional Estimation

3	High Dimensional Sparse Econometric Models: An Introduction	121
	Alexandre Belloni and Victor Chernozhukov	
3.1	The High Dimensional Sparse Econometric Model	121
3.2	The Setting and Estimators	127
3.2.1	The Model	127
3.2.2	LASSO and Post-LASSO Estimators	129
3.2.3	Intuition and Geometry of LASSO and Post-LASSO	131
3.2.4	Primitive Conditions	133
3.3	Analysis of LASSO	135
3.4	Model Selection Properties and Sparsity of LASSO	137
3.4.1	Sparsity Bounds	137
3.4.2	Perfect Model Selection Results	138
3.5	Analysis of Post-LASSO	139
3.6	Estimation of Noise Level	141
3.7	Monte Carlo Experiments	142
3.8	Application to Cross-Country Growth Regression	146
	Appendix	147
3.9	Proofs	147
3.10	Auxiliary Lemmas	153
	References	155

Part IV Invited Contributions on High-Dimensional Estimation

4	Model Selection in Gaussian Regression for High-Dimensional Data	159
	Felix Abramovich and Vadim Grinshtein	
4.1	Introduction	159
4.2	Preamble	161
4.3	Nearly-Orthogonal Design	163
4.4	Multicollinear Design	165
4.5	Bayesian Perspective	166
4.6	Concluding Remarks	168
	References	169

5	Bayesian Perspectives on Sparse Empirical Bayes Analysis (SEBA) . .	171
	Natalia Bochkina and Ya'acov Ritov	
5.1	Introduction	171
5.2	The Lassoes Procedure	174
5.2.1	Persistency and Bayesian Interpretation	174
5.2.2	Restricted Eigenvalues Condition and Oracle Inequalities	177
5.3	Group Lasso: Bayesian Perspective	180
5.4	RING Lasso: Bayesian Perspective	182
	References	189

Part V Invited and Contributed Talks Given During the Summer School

A	List of the Courses	193
B	List of the Invited Talks	195
C	List of the Contributed Talks and Posters	197
