

M. A. Van Hove S.Y. Tong

Surface Crystallography by LEED

Theory, Computation and Structural Results

With 19 Figures

Springer-Verlag Berlin Heidelberg New York 1979

Contents

1.	Introduction	1
1.1	LEED as a Tool for Surface Studies	1
1.2	Purpose of the Computational Programs	3
1.3	Physical Processes Included in the Programs	4
1.4	Capabilities of the Programs	4
1.5	Size, Speed and Limitations of the Programs	5
1.6	Relation to Other LEED Programs	5
1.7	Some Computational Considerations	6
2.	The Physics of LEED	7
2.1	A Simple Description of the LEED Process: Clean Crystals and Bragg Reflections in One Dimension	7
2.2	Peak Width and Electron Penetration Depth	11
2.3	Three-Dimensional Effects	13
2.4	Overlayer Effects	14
2.5	Elements of a LEED Theory	16
3.	Basic Aspects of the Programs	20
3.1	Units and Geometrical Conventions	20
3.2	Layers, Subplanes and Plane Waves	22
3.3	Superlattices	25
3.4	Atomic Scattering and the Calculation of Phase Shifts	26
3.5	Thermal Vibrations	30
3.6	Ordering of (ℓ , m) Pairs	32
4.	Symmetry and Its Use	34
4.1	Symmetry and Registries	34
4.2	Symmetry Among Beams	37
4.3	Some Formulas	41
4.4	Summary	42

5.	Calculation of Diffraction Matrices for Single Bravais-Lattice Layers	43
5.1	Layer Diffraction Matrices	43
5.2	Subroutine MSMF	45
5.3	The Intralayer Multiple-Scattering Matrix X	47
5.4	Scattering Amplitudes and Temperature Effects	47
6.	The Combined Space Method for Composite Layers: by Matrix Inversion	49
6.1	The Formalism	49
6.2	Subroutine MTINV	53
7.	The Combined Space Method for Composite Layers: by Reverse Scattering Perturbation	58
7.1	The Formalism of Reverse Scattering Perturbation (RSP) Theory	58
7.2	Combining RSP and Matrix Inversion	60
7.3	Subroutine MPERTI	62
8.	Stacking Layers by Layer Doubling	65
8.1	The Formalism	65
8.2	Bulk Treatment: Subroutine SUBREF	67
8.3	Surface Treatment: Subroutines ADRF1, DBLG, DBG	69
9.	Stacking Layers by Renormalized Forward Scattering (RFS) Perturbation	71
9.1	The Formalism	71
9.2	Subroutines RFS03, RFS02 and Others	73
10.	Assembling a Program: the Main Program and the Input	75
10.1	Preparing a Calculation	75
10.2	The Main Program	80
10.3	Explanation of Output	85
10.3.1	Print Output	85
10.3.2	Punch Output	86
10.4	Main Program for Clean fcc (111) and hcp (0001) Faces, Including Possible Top-Layer Registry Shifts, Using RFS	86
10.5	Main Program for a Small-Atom p(2×1) Overlayer on a fcc (111) Substrate, Using RSP and RFS	98

10.6	Main Program for a Clean fcc or bcc (100) Surface, Using RFS	112
10.7	Main Program for a p(2×2) Overlayer on an fcc or bcc (100) Substrate, Using Layer Doubling	121
10.8	Main Program for a c(2×2) Overlayer on an fcc or bcc (100) Substrate, with Rumpling of the Topmost Substrate Layer, Using Matrix Inversion and RFS	132
10.9	Main Program for an Upright Diatomic Molecule on an fcc or bcc (100) Substrate, Using Layer Doubling	145
11.	Subroutine Listings	157
12.	Structural Results of LEED Crystallography	251
12.1	Non-Metals	251
12.2	Clean Metals	252
12.3	Adsorption on Metals	253
12.4	Bibliography	259
Appendix A.	Symmetry Among Plane Waves	267
Appendix B.	Lattice Sums Over Sublattices	270
Appendix C.	A Line-Printer Plotting Program	272
