

CONTENTS

	<u>Page</u>
<u>Preface</u>	iii
 <u>CHAPTER I : INTRODUCTION.</u>	
1. Preliminaries	1
2. Percolation substructures	9
 <u>CHAPTER II : ADDITIVE SYSTEMS.</u>	
1. The general construction	14
2. Ergodic theorems for extralinear additive systems	19
3. Lineal additive systems	26
4. Contact systems: basic properties	29
5. Contact systems: limit theorems in the nonergodic case	38
6. Contact systems in several dimensions	44
7. Voter models	46
8. Biased voter models	55
9. Coalescing random walks	58
10. Stirring and exclusion systems	63
 <u>CHAPTER III : CANCELLATIVE SYSTEMS.</u>	
1. The general construction	66
2. Extralinear cancellative systems with pure births	71
3. Application to the stochastic Ising model	74
4. Generalized voter models	76
5. Annihilating random walks	80
 <u>CHAPTER IV : UNIQUENESS AND NONUNIQUENESS.</u>	
1. Additive and cancellative pregenerators	89
2. Uniqueness theorems	92
3. Nonuniqueness examples	98
 <u>Bibliography</u>	 101
<u>Subject index</u>	107
