

Contents

1.	Background from representation theory	1
2.	The symmetric group	5
3.	Diagrams, tableaux and tabloids	8
4.	Specht modules	13
5.	Examples	18
6.	The character table of $\mathfrak{S}_n$	22
7.	The Garnir relations	27
8.	The standard basis of the Specht module	29
9.	The Branching Theorem	34
10.	p-regular partitions	36
11.	The irreducible representations of $\mathfrak{S}_n$	39
12.	Composition factors	42
13.	Semistandard homomorphisms	44
14.	Young's Rule	51
15.	Sequences	54
16.	The Littlewood-Richardson Rule	60
17.	A Specht series for M^μ	65
18.	Hooks and skew-hooks	73
19.	The Determinantal Form	74
20.	The Hook Formula for dimensions	77
21.	The Murnaghan-Nakayama Rule	79
22.	Binomial coefficients	87
23.	Some irreducible Specht modules	89
24.	On the decomposition matrices of $\mathfrak{S}_n$	98
25.	Young's Orthogonal Form	114
26.	Representations of the general linear group	125
Appendix. The decomposition matrices of the symmetric groups $\mathfrak{S}_n$ for the primes 2 and 3 with $n \leq 13$		136
