| NON-METALS IN IRON AND STEEL                                                                                                 | 1    |
| General paper:                                                                                                               |      |
| Objects and methods of the element and<br>phase analyses of non-metals in steels:                                            |      |
| K. H. Koch                                                                                                                   | 3    |
| Determination of the oxygen activity<br>in carbon steel melts by electrochemical probes:                                     |      |
| W. Pluschkell                                                                                                                | 39   |
| Influence of the sample preparation on the<br>determination of nitrides in steel by hot<br>extraction in streaming hydrogen: |      |
| D. Thierig* and H. H. Meier                                                                                                  | 53   |
| Problems of the determination of hydrogen<br>in plain steel:                                                                 |      |
| K. H. Koch                                                                                                                   | 65   |
| Investigations about the influence of water<br>on special ferro alloys:                                                      |      |
| K. H. Schmitz, E. Thiemann* and W. Ansmann                                                                                   | 77   |
| The determination of low contents of carbon<br>and sulphur in carbon steel:                                                  |      |
| K. H. Koch* and K. Ohls                                                                                                      | 97   |
| Multielement trace analysis in solids by<br>spark source mass spectrometry:                                                  |      |
| H. E. Beske*, G. Frerichs, M. D. Jahn<br>and G.-G. Melchers                                                                  | 107  |

Identification of non-metallic inclusions in  
steels by electron microscopy:

M. Pohl\* and W.-G. Burchard 119

DETERMINATION OF NON-METALS IN METALS

BY ACTIVATION ANALYSIS 133

General paper:

The analysis of non-metals by nuclear methods:

C. Engelmann 135

Analysis of hydrogen in metals by a nuclear  
reaction technique:

H. Baumann, U. Behrens, K. Bethge, 151

F. Rauch\*, H. Schwenk, B. Streb and W. Strohl

Studies of He, Li and B in metals by use of  
(n,p)-and (n, $\alpha$ )-reactions:

D. Fink\*, J. P. Biersack,

F. Jahnel and R. A. Henkelmann 163

Nuclear microprobe measurements of the spatial  
distribution of non-metals in metals:

J. W. McMillan 173

Influence of the research programmes "Standard  
reference materials" of the BCR on the recent  
progress of activation analysis and its importance  
in this research work:

P. Albert 193

Precision of analysis by irradiation with charged particles for the determination of non-metallic impurities in metals:

G. Blondiaux\*, M. Valladon, C. Koemmerer,  
A. Giovagnoli and J. L. Debrun 233

Error causes in the determination of oxygen by charge particle irradiation:

M. Fedoroff\*, C. Loos-Neskovic,  
J. C. Rouchaud and G. Revel 243

Determination of oxygen in platinum by helium-3 activation analysis:

H. Petri\* and G. Erdtmann 253

The determination of boron in Al 99,5 and AlMg3 by charged particle activation analysis:

P. Goethals\*, C. Vandecasteele and J. Hoste 259

The determination of boron in zirconium and zircalloy by charged particle activation analysis:

R. Mortier\*, C. Vandecasteele and J. Hoste 267

The determination of nitrogen in refractory metals by charged particle activation analysis:

K. Strijckmans\*, C. Vandecasteele and J. Hoste 281

The determination of traces of carbon, nitrogen and oxygen in molybdenum and tungsten:

C. Vandecasteele\*, K. Strijckmans,  
C. Engelmann and H. Ortner 293

Photon activation analysis of carbon, nitrogen  
and oxygen in refractory metals:

B. F. Schmitt\* and H.-K. Fusban 307

Experience of the use of  $\gamma$ -photon activation  
analysis for the determination of oxygen in sodium:

J. S. Hislop\*, R. Thompson and D. A. Wood 321

The determination of sulphur in copper, nickel  
and aluminium alloys by proton activation analysis:

C. Vandecasteele\*, J. Dewaele, M. Esprit  
and P. Goethals 331

NON-METALS IN NON-FERROUS METALS 341

General paper:

State of the analysis of non-metals in non-ferrous metals:

D. Hirschfeld\* and H. Ortner 343

About the reliability of the determination of  
carbon in refractory metals by combustion methods:

E. Grallath\*, F. Bühler, A. Meyer and G. Tölg  
395

Difficulties with the quantitative determination  
of carbon, nitrogen and oxygen in thin TiN-layers  
by Auger electron spectroscopy:

H. Schneider\* and E. Nold 413

The determination of oxygen in powdered tungsten  
carbide by reducing fusion: primary carbon dioxide  
suppression, working conditions selection and ad-  
sorbed moisture effects:

A. Colombo\* and R. Vivian 423
