

Contents

Part I. Foundations of Probability and Utility

1. Methodology of Statistical Analysis	13
1.1 Conceptions of Statistics	13
1.2 History of Bayesian Statistics	13
1.3 A Quality Control Example	23
1.4 Conclusion	30
2. Finite Probability	32
2.1 Definition and Interpretation of Probability	32
2.2 Subjective Probability and Betting	33
2.3 Relation between Subjective Probability and Bayes' Theorem ..	35
2.4 Bibliographical Remarks	37
3* Interpretations of Probability	40
3*1 Introduction	40
3*2 Relative Frequencies	40
3*3 Inductive Probability	43
3*4 Personal Probabilities	48
3*5 Subjective Probability and Relative Frequencies	59
3*6 Some General Conclusions	60
Appendix A. Criticisms of the Classic Conception of Probability ..	63
Appendix B. Simultaneous Definition of Utility and Subjective Probability	64
4* Utility and Decision Theory	67
4*1 Introduction	67
4*2 Definition and Existence of Utility Functions	68
4*3 Expected Utility	72
4*4 Bernoullian Utility: The Petersburg Game	78
4*5 Discussion	82
4*6 Subjective Probability and Utility	84
4*7 Conditional Utility	85
Appendix A. Probability of Gambles	90
Appendix B. Satisficing Behavior Rules	91
5. Analysis of Probability	95
5.1 Probability Measures and Random Variables	95
5.2 Sample Space	96
5.3 Probability Distributions	97
5.4 Joint, Conditional and Marginal Probability	98

5.5 Statistical Independence	99
5.6 Mathematical Expectation: The Mean	100
5.7 Measures of Dispersion: Variance and Standard Deviation	104
5.8 Problems	106

Part II. Simple Random Processes and Probability Distributions

6. Bernoulli Trials	113
6.1 Binomial Distributions	113
6.2 Bernoulli Process	116
6.3 Geometric Distributions	119
6.4 Problems	121
7. Gaussian Analysis	125
7.1 Characteristics of a Gaussian or Normal Process	125
7.2 Gaussian Distributions	125
7.3 Sampling Distributions	128
7.4 The Central Limit Theorem	129
7.5 Chebychev's Inequality and Law of Large Numbers	132
7.6 Problems	134

Part III. Topics in Statistical Inference, Information and Decision

8. Statistical Inference	141
8.1 An Application of Bayes' Theorem to Genetic Risks	141
8.2 Bayes' Theorem Reconsidered	143
8.3 Application to Bernoulli Processes	145
8.4 The Likelihood Function	147
8.5* Prior and Posterior Distributions	149
8.6* Sufficient Statistics	151
8.7* Vague Priors	153
8.8 Problems	155
9* Information, Inference and Decision	161
9*1 Introduction	161
9*2 The Structure of Information Theory	161
9*3 Information without Probability	165
9*4 Information in Statistical Decision Theory	168
9*5 Comparison of Information	170
9*6 Economizing Information	172
9*7 Decision Theory and Information Algebras	174
9*8 Measures of Information in Statistical Decisions (Games) ...	177
9*9 Expected Value of Information	180
9*10 Sampling Information	182

9*11 Diagnostic Testing	185
9*12 Problems	187
Appendix A. Interaction between Information and Probability	190
Appendix B. An Illustrative Application of the 'Value of Information' to Medical Screening	200
10. Sequential Analysis and Optimal Stopping	211
10.1 General Consideration	211
10.2 Sequential Decision Problems	211
10.3 The Marriage Problem	212
10.4 Stopping Rule Problems	214
10.5 Payoff and Decision structure	216
10.6 Decision Trees	217
10.7 Adaptive Processes and Optimal Stopping	218
10.8 Sequential Estimation	220
10.9 Gambling Problems	222
10.10 Sequential Statistical Problems	223
10.11 Existence of Optimal Stopping Rules	224
10.12 Sequential Statistical Analysis	224
10.13 Bayesian Procedures	226
10.14 Hypothesis Testing	227
10.15 The Sequential Likelihood (Probability) Ratio Test	231
10.16 Problems	232
Appendix A. Markovian Decision Process	235
Appendix B. Optimal Search Process	237
