

TABLE OF CONTENTS

TOPIC I. PROLIFERATION, SPREAD AND REACTION-DISPERSAL PROCESSES

Discussion by the Editors..... 1

Ia. BIOLOGICAL ASPECTS

Genetic basis of biological growth.....R.Baserga 3

Some observations on the kinetics of haemopoietic stem
cells and their relationship to the spatial cellular
organisation of the tissue.....B.I.Lord and R.Schofield 9

Proliferative cell populations in surface epithelia: bio-
logical models for cell replacement.....C.S.Potten 23

Ib. MATHEMATICAL ASPECTS AND APPLICATIONS

Density dependent Markov population processes...A.D.Barbour 36

A model of development of a cell.....R.Bartoszyński 50

Spatial spread in branching processes.....J.D.Biggin 57

Pattern formation by bacteria..F.C.Hoppensteadt and W.Jäger 68

Random processes in random environments.....H.Kesten 82

Segregation model and its applications.....M.Nagasawa 93

Positive recurrence of multi-dimensional population-
dependent branching processes.....W.Rittgen 98

Population growth with large random fluctuations.....
.....H.C.Tuckwell 109

Niche overlap and invasion of competitors in random envi-
ronments.II. The effects of demographic stochasticity...
.....M.Turelli 119

Behavior of limiting diffusions for density-dependent
branching processes.....C.(Lipow) Wofsy 130

TOPIC II. RANDOM SYSTEMS WITH LOCALLY INTERACTING OBJECTS

Discussion by the Editors..... 139

IIa. THEORY

Local interactions with a global signal: a voter model..... 141
.....H.Föllmer

Interacting Markov processes.....	T.M.Liggett	145
On a class of branching processes on a lattice with in- teractions.....	K.Schürger	157

IIb. MODELS

The asymptotic behavior of a probabilistic model for tumor growth.....	M.Bramson and D.Griffeath	165
An Ising model of a neural network.....	W.A.Little	173
Embryogenesis through cellular interactions.....	A.Robertson	180
Biological interpretation of a random configuration model for carcinogenesis.....	P.Tautu	196

TOPIC III. SPATIAL MODELS IN EPIDEMIOLOGY AND GENETICS

Discussion by the Editors.....		221
On the spatial spread of a pattern.....		
.....	H.-P.Altenburg and W.J.Bühler	223
Spatial models in the epidemiology of infectious diseases..		
.....	N.T.J.Bailey	233
Population controlled spread and intensity of diseases in wildlife.....	K.Bögel	262
Clines in a discrete time model in population genetics.....		
.....	O.Diekmann	267
Clines induced by variable migration.....		
.....	P.C.Fife and L.A.Peletier	276
Asymptotic behavior of the solutions of the Fisher equa- tion.....	F.Rothe	279
Random walks and probabilities of genetic identity in a tree.....	S.Sawyer	290
Travelling-front solutions for integrodifferential equa- tions II.....	K.Schumacher	296
Some mathematical considerations of how to stop the spatial spread of a rabies epidemic.....	H.R.Thieme	310
Some deterministic models for the spread of genetic and other alterations.....	H.F.Weinberger	320

TOPIC IV. MODELS FOR CELL MOTILITY

Discussion by the Editors.....		351
Orientation of cells migrating in a chemotactic gradient...		
.....	W.Alt	353

Theoretical models for the specific adhesion of cells to cells or to surfaces.....	G.I.Bell	367
Chemotaxis in bacteria: a beginner's guide to the litera- ture.....	H.C.Berg	377
Assessing the Keller-Segel model: how has it fared?.....		
.....	E.F.Keller	379
Modeling chemosensory responses of swimming eukaryotes.....		
.....	I.R.Lapidus and M.Levandowsky	388
Mathematical model for tissue inflammation: effects of spatial distribution, cell motility, and chemotaxis.....		
.....	D.Lauffenburger	397
Mathematical theories of topotaxis.....	R.Nossal	410

TOPIC V. STOCHASTIC VERSUS DETERMINISTIC APPROACHES

Discussion by the Editors.....		441
Connections between stochastic and ordinary integral equa- tions.....	H.Doss	443
Relationships between stochastic and deterministic popula- tion models.....	T.G.Kurtz	449
Remarks on limit theorems for partial differential equa- tions with random coefficients.....	G.C.Papanicolaou	468

TOPIC VI. FURTHER MATHEMATICAL APPROACHES AND TECHNIQUES

Discussion by the Editors.....		471
Topological techniques in reaction-diffusion equations.....		
.....	C.Conley and J.Smoller	473
Percolation.....	J.M.Hammersley	484
Some ergodic theorems for spatial processes.....	X.X.Nguyen	495
Percolation models in two and three dimensions...	R.T.Smythe	504
