

C O N T E N T S

	Page
Notation	1
 CHAPTER I. LOCAL OPERATORS	
1. General Properties	1
2. The Markov process associated to a local operator	6
3. Elliptic degenerated operators in R^n	12
4. Excessive functions	15
 CHAPTER II. QUASIHARMONIC SPACES	
1. Definitions	21
2. Construction of balayages and of potential kernels	24
3. An inequality	31
4. C-strict potentials	33
5. Construction of functions with locally given singularities	37
6. Construction of local operators on a quasiharmonic space	39
 CHAPTER III. TOPOLOGICAL PROPERTIES OF GLOBAL TRANSITION FUNCTION	
1. The general case	44
2. Continuity cases	47
 CHAPTER IV. THE ADDITION OF LOCAL OPERATORS ON PRODUCT SPACES	
1. A simple lemma	50
2. The sum of two local operators	51
3. The sum of a series of local operators	54
4. The operators $L-d/dt$	55
5. Bauer spaces and strong Feller semigroups	58
6. (SFS) for the sum of a series of local operators	63
 CHAPTER V.	
1. Local operators on a l.c.a group	67
2. Local operators on harmonic spaces	69
 CHAPTER VI. FELLER RESOLVENTS	
1. Convex cones of lower semicontinuous functions	76
2. Feller resolvents	79
3. Excessive functions for Feller resolvents	86

4. The local character	89
Note on the product of semigroups in Hilbert spaces . . .	96
