

Contents

1	Introduction	1
	Hildegard Meyer-Ortmanns	
 Part I Principles of Evolution		
2	Physical Principles of Evolution	45
	Peter Schuster	
3	The Interplay of Replication, Variation and Selection in the Dynamics of Evolving Populations	81
	Richard A. Blythe	
4	A Simple General Model of Evolutionary Dynamics	119
	Stefan Thurner	
5	Can We Recognize an Innovation? Perspective from an Evolving Network Model	145
	Sanjay Jain and Sandeep Krishna	
 Part II From Random to Complex Structures: The Concept of Self-Organization for Galaxies, Asters, and Spindles		
6	How Stochastic Dynamics Far from Equilibrium Can Create Nonrandom Patterns	175
	Gunter M. Schütz	
7	Structure Formation in the Universe	189
	Matthias Bartelmann	

8 The Need for Quantum Cosmology	205
Claus Kiefer	
9 Self-Organization in Cells	219
Leif Dehmelt and Philippe Bastiaens	

Part III Protocells In Silico and In Vitro

10 Approach of Complex-Systems Biology to Reproduction and Evolution	241
Kunihiko Kaneko	
11 Wet Artificial Life: The Construction of Artificial Living Systems . . .	261
Harold Fellermann	
12 Towards a Minimal System for Cell Division	281
Petra Schwille	

Part IV From Cells to Societies

13 Bacterial Games	297
Erwin Frey and Tobias Reichenbach	
14 Darwin and the Evolution of Human Cooperation	331
Karl Sigmund and Christian Hilbe	
15 Similarities Between Biological and Social Networks in Their Structural Organization	349
Byungnam Kahng, Deokjae Lee, and Pureun Kim	
16 From Swarms to Societies: Origins of Social Organization	367
Alexander S. Mikhailov	
Index	381
