

Contents

Historical Overview	14
1 Principles of Computed Tomography	18
1.1 General Considerations on Slice Imaging	18
1.1.1 Computed Tomography – a Digital Modality	18
1.1.2 Why Do Slice Images Offer Higher Contrast?	21
1.2 Basic Principles of CT	23
1.2.1 What Do We Measure in CT?	24
1.2.2 How Do We Measure an Object in CT?	26
1.2.3 How Do We Compute a CT Image?	27
1.2.4 What Is Displayed in CT Images?	31
2 Technical Concepts	37
2.1 Phases of Development and Goals	37
2.1.1 The Seventies – from Head to Whole Body Scanning	37
2.1.2 The Eighties – Fast Scanning of Single Slices	39
2.1.3 The Nineties – Fast Volume Scanning	40
2.1.4 The 2000s – Diversity and Even Faster Volume Scanning	41
2.1.5 The 2010s will be the Decade of Sub-mSv CT!	42
2.2 Standard Scanner Configuration	42
2.2.1 Mechanical Design	42
2.2.2 X-ray Components	47
2.2.3 Collimators and Filtration	51
2.2.4 Detector Systems	53
2.3 Scan Modes and Scan Parameters	64
2.3.1 Survey Radiographs	64
2.3.2 Scanning Single Sections – Sequential CT	65
2.3.3 Scanning Single Sections – “Step and Shoot” Modes	66
2.3.4 Material-Selective Imaging – Dual-Energy CT	67
2.3.5 Serial Scanning – Dynamic CT	67
2.3.6 CT Fluoroscopy – Interventional CT	68
2.3.7 Volume Scanning – Spiral CT	68
2.3.8 Volume Scanning – Cone-beam CT	69
2.4 Special Scanner Concepts	71
2.4.1 Electron Beam CT	72

2.4.2 The “Dynamic Spatial Reconstructor”	73
2.4.3 Flat Detector CT Scanners	74
2.4.4 PET/CT Combination Scanners	79
2.4.5 SPECT/CT Combination Scanners	81
2.4.6 Dual Source CT	83
3 Spiral CT	85
3.1 First Considerations and Efforts	85
3.2 Scanning Principle and Techniques in Spiral CT	87
3.3 Image Reconstruction in Spiral CT	90
3.3.1 Basic Approach to z-Interpolation (360°LI)	91
3.3.2 z-Interpolation Using Data Rebinning (180°LI)	92
3.3.3 Variations of 180° z-Interpolation Algorithms	94
3.4 Considerations for Multi-slice Spiral CT	97
3.4.1 z-Interpolation in Multi-slice Spiral CT (180°MLI)	97
3.4.2 z-Filtering in Multi-slice Spiral CT (180°MFI)	97
3.4.3 ECG-correlated Cardiac Imaging	100
3.5 Considerations for Cone-beam Spiral CT	102
3.5.1 Approaches for up to 64 Slices	102
3.5.2 Approaches for 64 Slices and more	106
3.5.3 High-pitch Dual Source CT Spiral Scanning	108
4 Image Quality	111
4.1 Variables and Procedures for Sequential CT	112
4.1.1 CT Values, Uniformity, Contrast and Linearity	112
4.1.2 Pixel Noise	114
4.1.3 Spatial Resolution – Resolution at High Contrast	116
4.1.4 Contrast Resolution – Resolution at Low Contrast	128
4.1.5 Artifacts	130
4.2 Variables and Procedures for Spiral CT	134
4.2.1 General Considerations	134
4.2.2 Pixel Noise	135
4.2.3 Slice Sensitivity Profiles	137
4.2.4 Resolution in the z-Direction	140
4.2.5 Considerations for Multi-slice Spiral CT	146
4.2.6 Considerations for Cone-beam Spiral CT	148
4.2.7 Artifacts in Spiral CT	151
4.2.8 The Effect of Finer Sampling in the z-Direction	153
4.2.9 Performance of Dual Source CT	156
4.3 Considerations for Flat Detector CT	157
4.3.1 Image quality considerations for C-arm-based FDCT	158
4.3.2 Image quality considerations for FDCT of the facial skull	162

4.3.3 Efforts at artifact reduction in FDCT	164
4.4 Total System Performance	168
4.4.1 The Interdependence of Noise, Dose and Resolution	168
4.4.2 Figures of Merit	171
4.5 Acceptance Test and Constancy Test	172
5 Dose	175
5.1 CT – the High Dose Myth	175
5.2 Technical Parameters for Dose Measurement	178
5.2.1 Dose Distributions in Sequential Single-slice Scans	178
5.2.2 Stray Radiation	186
5.2.3 Additional Considerations for Spiral CT Scans	187
5.2.4 Additional Considerations for Wide Detectors	189
5.2.5 CTDI Concepts for Wide Detectors	190
5.2.6 Dose Reference Levels for CT	192
5.2.7 Issues with CTDI	193
5.3 Patient Dose in CT	194
5.3.1 Influence of Scanning Parameters on the Patient Dose	194
5.3.2 Influence of Spiral CT on Patient Dose	196
5.3.3 Estimation of Organ Dose Values and Effective Dose	197
5.3.4 Estimation of Effective Dose	201
5.3.5 Issues with the determination of patient dose	207
5.4 Possibilities for Reducing the Dose Further	208
5.4.1 Influence by the Examiner	208
5.4.2 Technical Measures and New Approaches	210
5.5 How shall we deal with the discussion of dose?	222
5.5.1 Further Optimization of CT Systems	223
5.5.2 Information about Dose, Benefits and Risks	224
5.5.3 The Author's Summing up and Recommendations	228
6 Processing and Visualization of Images	230
6.1 Simple Image Processing and Evaluation Procedures	230
6.2 Two-dimensional Displays	231
6.3 Three-dimensional Displays	233
6.3.1 Surface Displays	234
6.3.2 Projection Displays	236
6.3.3 Volume Rendering Techniques	237
6.3.4 Virtual Endoscopy	238
6.3.5 Recommendations on the Choice of 3D Display Methods	239
6.4 How to handle all the Images	242

7 Special Applications	245
7.1 General Considerations	245
7.2 Quantitative CT	246
7.3 Phase-selective Imaging of the Heart	250
7.3.1 Prospective Triggering in Sequential CT	251
7.3.2 Retrospective Gating in Spiral CT	252
7.3.3 High-pitch Spiral Dual Source CT with Prospective Triggering	254
7.3.4 Coronary Calcium Measurements with CT	255
7.4 Dual Energy CT	257
7.4.1 Basic physics of DECT	258
7.4.2 Technical solutions	263
7.4.3 DECT applications	265
7.5 Navigated Image-guided Interventions	268
7.6 Pre-clinical Imaging with CT (Micro-CT)	272
7.6.1 Micro-CT in-vitro imaging	272
7.6.2 Micro-CT in-vivo imaging	275
7.6.3 Quality control and dose assessment	278
7.7 Assessment of Tissue Perfusion with CT	282
7.7.1 Brain perfusion measurements in clinical CT	282
7.7.2 Alternative approaches to perfusion assessment by CT	285
7.7.3 Considerations regarding quality control and dose	287
8 The Future of CT	290
8.1 General considerations	291
8.2 Developments of technologies	292
8.3 Features of a dedicated breast CT scanner	294
8.4 Conclusions	302
9 Mathematical Aspects of Image Reconstruction	305
9.1 2D Image Reconstruction	307
9.1.1 Definition of 2D Parallel Projections	307
9.1.2 Reconstruction of Parallel Data	308
9.1.3 Parallel-Beam FBP	310
9.1.4 Definition of 2D Fan-Beam Projections	311
9.1.5 Fan-Beam FBP	312
9.1.6 Fan-Beam FBP for Equiangular Fans	313
9.1.7 Rebinning	315
9.1.8 Rebinning of Equiangular Fan-Beam Data	316
9.2 3D Image Reconstruction	316
9.2.1 Definition of Cone-Beam Projections	317

9.2.2 The Feldkamp Algorithm	318
9.2.3 EPBP, a Feldkamp-Type Algorithm	319
9.2.4 Single-Slice Rebinning Algorithms	322
9.2.5 Exact 3D Reconstruction from Cone-Beam Projections	324
References	329
Abbreviations and Symbols	346
Glossary	350
Index Terms	370
