

1. Introduction	1
2. Operations with rigid bodies	17
2.1 General explication	17
2.2 Construction of regions	26
2.3 Construction of transport mappings	48
3. Regions and transport mappings	61
3.1 4 Axioms	61
3.2 Points	66
3.3 Regions as point sets	71
3.4 Congruent mappings	79
3.5 Chains I	83
3.6 Completion of the group $\tilde{T}$	91
3.7 Chains II	100
4. The Helmholtz-Lie problem	108
4.1 Implications of the theorem of Yamabe	108
4.2 Mobility and distance measured by chains	118
4.2.1 Proof of "(i) $\Rightarrow$ (ii)"	122
4.2.2 Proof of "(ii) $\Rightarrow$ (iii)"	126
4.2.3 Proof of "(iii) $\Rightarrow$ (i)"	132
4.3 Tits/Freudenthal classification	149
5. Characterization of Euclidean geometry	152
5.1 Dimension	152
5.2 Curvature	154
5.3 Euclidean representation	155
6. References	160
7. Notations	163
