An asterisk (*) indicates the author who presented the paper.

<u>Part I: Models of Physiological Processes</u>	<u>Page</u>
<i>Introduction: H. Hatze</i>	1
<i>R.B. Stein*, F. Parmiggiani and M.N. Oğuztöreli: Linear and non-linear analysis of mammalian motor control</i>	4
<i>H. Hatze: Optimal processes of neuro-musculoskeletal control systems</i>	23
<i>R.J. Douglas and T.J. van der Werff*: A model cylinder of excitable cells simulates fibrillation on the basis of inhomogeneous refractory periods</i>	40
<i>D.K. McIlroy: An enzyme theory of nervous conduction</i>	56
<i>D.A. Gilbert: Mathematics and cancer</i>	97
<i>C.Z. Roux: A dynamic stochastic model for animal growth</i>	117
<u>Part II: Morphological Models</u>	
<i>Introduction: W.F. Harris</i>	129
<i>M. Brannigan* and B.C. Fabian: A two-morphogen diffusion model for gastrulation</i>	131
<i>S. Saffer*, A.H.J. Christensen and D.H. Jacobson: Modelling the human red blood cell shape</i>	149
<i>W.F. Harris* and R.O. Erickson: Model biological tubules: the geometry and contraction of tubular arrays of spheres .</i>	175
<i>R.O. Erickson: Microfibrillar structure of growing plant cell walls</i>	192
<i>S.H. von Solms: Modelling the growth of simple biological organisms using formal language theory</i>	213

Part III: Ecological and Population ModelsPage

<i>Introduction: W.M. Getz</i>	<i>227</i>
<i>G.L. Swartzman: Evaluation of ecological simulation models ...</i>	<i>230</i>
<i>G.S. Hansford: Mathematical models for the rotating biological disc reactor</i>	<i>268</i>
<i>W.M. Getz: Harvesting models and stock recruitment curves in fisheries management</i>	<i>284</i>
<i>D.S. Butterworth* and G.G. Newman: The application of modelling to Southern African fisheries management</i>	<i>305</i>
<i>A.M. Starfield*, S.C.J. Joubert, B.H. Cohen, E.K. Hague and D.J. Stein: An exploratory model of Impala population dynamics</i>	<i>338</i>
