

TABLE OF CONTENTS

INTRODUCTION.....	1
1. STATISTICAL MECHANICS AND THE RIEMANN MONODROMY PROBLEM	
1.1 B.M. McCoy and J.H.H. Perk, Continuous exponents of spin correlation functions of inhomogeneous layered Ising models.....	12
1.2 T. Miwa and M. Jimbo, Introduction to holonomic quantum fields.....	28
1.3 D.B. Abraham, Planar Ising ferromagnet: correlation functions and the inverse scattering method.....	37
2. COMPLETELY INTEGRABLE SYSTEMS	
2.1 D.V. Chudnovsky, Infinite component two-dimensional completely integrable systems of KdV type.....	57
2.2 D.V. Chudnovsky, Infinite component σ -models and instanton solutions.....	71
2.3 D.V. Chudnovsky, The representation of an arbitrary, two-dimensional completely integrable system as the common action of two commuting one-dimensional Hamiltonian flows.....	85
2.4 J.P. Bourguignon, Self-duality of Yang-Mills fields and of gravitational instantons.....	95
2.5 R.C. Churchill, On proving the nonintegrability of a Hamiltonian system.....	103
2.6 M.S. Berger, Classical solutions in nonlinear Euclidean field theory and complete integrability.....	123
2.7 D.V. Chudnovsky, G.V. Chudnovsky, Hamiltonian structure of isospectral deformation equations. Elliptic curve case.....	134
2.8 D.V. Chudnovsky, G.V. Chudnovsky, Quantum Hamiltonians associated with finite-dimensional Lie algebras and vortices S-matrices.....	147

2.9	D.V. Chudnovsky, G.V. Chudnovsky, A. Neveu, Classical and quantum operator nonlinear Schrödinger equation I.....	157
3.	SPECTRAL PROBLEMS	
3.1	G. Parisi, Trace identities for the Schrödinger operator and the WKB method.....	178
3.2	A. Voros, Zeta functions of the quartic (and homogeneous anharmonic) oscillators.....	184
3.3	L. Bers, On trace formula.....	209
3.4	D.V. Chudnovsky, G.V. Chudnovsky, Resolvent and trace identities in the one-dimensional case.....	215
3.5	S. Aubry, The devil's staircase transformation in incommensurate lattices.....	221
4.	THE PADÉ APPROXIMATION, THE RIEMANN BOUNDARY VALUE PROBLEM AND ARITHMETIC APPLICATIONS	
4.1	J. Nuttall, The convergence of Padé approximants and their generalizations.....	246
4.2	J.L. Gammel and J. Nuttall, Note on generalized Jacobi polynomials.....	258
4.3	D.V. Chudnovsky, G.V. Chudnovsky, Multidimensional Hermite interpolation and Padé approximation.....	271
4.4	G.V. Chudnovsky, Hermite-Padé approximations to exponential functions and elementary estimates of the measure of irrationality of π	299
4.5	G.V. Chudnovsky, Criteria of algebraic independence of several numbers.....	323
4.6	K.H. Prendergast, Rational approximation for nonlinear ordinary differential equations.....	369
