

Contents

<u>Chapter 1. Mathematical Methods</u>	1
1.1 Study of Singularities	
Padé-Hermite Approximants. By J. Della Dora	3
Somme Comments About the Numerical Utilization of Factorial Series By J.P. Ramis and J. Thomann	12
Introduction to Real Quasianalytic Classes and Continuation Problems By T. Reboul	26
1.2 Critical Phenomena in Dynamical Systems	
Groups Transformations and Critical Asymptotics Applications to Non-Linear Differential and Partial Derivative Equations. By J.R. Burgan, M.R. Feix, E. Fijalkow, M.P. Moraux, and A. Munier	37
Antecedent Invariant Curves of an Endomorphism. Influence Domain of a Stable Cycle Coexisting with an Isolated Stable Invariant Curve By R.L. Clerc and Ch. Hartmann	47
Topological Entropy As a Measure of Dynamic Chaos in Endomorphisms By J. Couot, C. Gillot, I. Gumowski, and C. Mira	54
Topological Entropy of Markov Processes for a C^0 -Endomorphism of the Interval. By C. Gillot and G. Gillot	57
Sequential Iteration of Threshold Functions. By E. Golès Chacc	64
Some Properties of Second Order Dynamic Systems with Parametric Resonances By I. Gumowski	71
<u>Chapter 2. Applications in Physics</u>	77
2.1 Critical Phenomena in Solid-State Physics	
On the Bifurcation of Certain Kam Tori in the Standard Mapping By S. Aubry	79
MO Stochasticity Criterion. By R. Caboz and A. Lonke	81

Singularities in Saw Numerical Simulations. By F. Cuzzo and E.E. Cambiaggio	86
Monte Carlo Measurement of the Single Vortex Free Energy in the Kosterlitz-Thouless Theory. By H.J. Hilhorst, H.N.J. Vogelij, C. van Leeuwen, and B.P.Th. Veltman	97
Algebraic Method for the Computation of the Partition Functions of Spin Glasses and Numerical Study of the Distributions of Zeros. By B. Lacolle	104
Percolation and Gelation by Additive Polymerization. By P. Manneville and L. de Sèze	116
Ground State Structure of the Random Frustration Model in Two Dimensions By R. Maynard and R. Rammal	125
Line Defects and the Glass Transition. By N. Rivier and D.M. Duffy	132
Universality in Size-Effects in 2D Percolation. By J. Rousseny and H. Ottavi	143

2.2 Use of Renormalisation Techniques

The Phenomenological Renormalization Method. By B. Derrida and J. Vannimenus	153
Computation of the Yang-Lee Edge Singularity in Ising Models By P. Moussa	159
Real-Space Renormalization-Group Method for Quantum Systems: Application to Quantum Frustration in Two Dimensions. By K.A. Penson, R. Jullien, P. Pfeuty, and K. Uzelac	166
Yang-Lee Edge Singularity by Real Space Renormalization Group By K. Uzelac, R. Jullien, P. Pfeuty, and P. Moussa	171

Chapter 3. Applications in Biology

Numerical Determination of a Periodical Solution of Discontinuous Type, near a Singular Point, for a Neurophysiological Model. By J. Argemi and B. Rossetto	179
On the Relation Between the Logical Structure of Systems and Their Ability to Generate Multiple Steady States or Sustained Oscillations By R. Thomas	180
Critical Delays in Logical Asynchronous Models. By A. Verhamme and P. Van Ham	194

Chapter 4. Applications in Chemistry

A Simulation Technique for Studying Critical Properties of Chemical Dissipative Systems. By P. Hanusse	203
--	-----

Critical Paths and Passes: Application to Quantum Chemistry By D. Liotard and J.-P. Penot	213
<u>Chapter 5. Non-Physical Applications of Statistical Mechanics</u>	<u>223</u>
Telephone Network: Statistical Mechanics and Non-Random Connecting Procedures. By E. Bonomi, J.L. Lutton, and M.R. Feix	225
The Thermodynamic Formalism in Population Biology. By L. Demetrius	233
Asymptotic Inference for Markov Random Fields on $\mathbb{Z}^d$. By J. Demongeot	254
