PREFACE

1. INTRODUCTION	1
1.1 The Role of Variational Theory in Mechanics.	1
1.2 Some Historical Comments	2
1.3 Plan of Study.	5
2. MATHEMATICAL FOUNDATIONS OF CLASSICAL VARIATIONAL THEORY	7
2.1 Introduction	7
2.2 Nonlinear Operators.	9
2.3 Differentiation of Operators	17
2.4 Mean Value Theorems.	25
2.5 Taylor Formulas.	28
2.6 Gradients of Functionals	32
2.7 Minimization of Functionals.	35
2.8 Convex Functionals	40
2.9 Potential Operators and the Inverse Problem.	43
2.10 Sobolev Spaces	46
3. MECHANICS OF CONTINUA—A BRIEF REVIEW.	53
3.1 Introduction	53
3.2 Kinematics	54
3.3 Stress and the Mechanical Laws of Balance.	58
The Principle of Conservation of Mass.	60
The Principle of Balance of Linear Momentum.	61
The Principle of Balance of Angular Momentum	63
3.4 Thermodynamic Principles	64
The Principle of Conservation of Energy.	64
The Clausius-Duhem Inequality.	67
3.5 Constitutive Theory.	69
Rules of Constitutive Theory	69
Special Forms of Constitutive Equations.	73
3.6 Jump Conditions for Discontinuous Fields	78

4.	COMPLEMENTARY AND DUAL VARIATIONAL PRINCIPLES IN MECHANICS	83
4.1	Introduction	83
4.2	Boundary Conditions and Green's Formulas	88
4.3	Examples from Mechanics and Physics.	95
4.4	The Fourteen Fundamental Complementary-Dual Principles	105
4.5	Some Complementary-Dual Variational Principles of Mechanics and Physics	115
4.6	Legendre Transformations	124
4.7	Generalized Hamiltonian Theory	129
4.8	Upper and Lower Bounds and Existence Theory.	132
4.9	Lagrange Multipliers	137
5.	VARIATIONAL PRINCIPLES IN CONTINUUM MECHANICS.	139
5.1	Introduction	139
5.2	Some Preliminary Properties and Lemmas	140
5.3	General Variational Principles for Linear Theory of Dynamic Viscoelasticity	143
5.4	Gurtin's Variational Principles for the Linear Theory of Dynamic Viscoelasticity.	153
5.5	Variational Principles for Linear Coupled Dynamic Thermoelastoclasticity.	158
	Linear (Coupled) Thermoelastoclasticity.	161
5.6	Variational Principles in Linear Elastodynamics.	162
5.7	Variational Principles for Linear Piezoelectric Elastodynamic Problems	169
5.8	Variational Principles for Hyperelastic Materials.	173
	Finite Elasticity	175
	Quasi-Static Problems	182
5.9	Variational Principles in the Flow Theory of Plasticity	184
5.10	Variational Principles for a Large Displacement Theory of Elastoplasticity	186
5.11	Variational Principles in Heat Conduction.	189
5.12	Biot's Quasi-Variational Principle in Heat Transfer.	191
5.13	Some Variational Principles in Fluid Mechanics and Magnetohydrodynamics	195
	Non-Newtonian Fluids	197
	Perfect Fluids	198
	An Alternate Principle for Inviscid Flow.	199
	Magnetohydrodynamics	200

5.14	Variational Principles for Discontinuous Fields.	202
	Hybrid Variational Principles.	208
6.	VARIATIONAL BOUNDARY-VALUE PROBLEMS, MONOTONE OPERATORS, AND VARIATIONAL INEQUALITIES	215
6.1	Direct Variational Methods	215
6.2	Linear Elliptic Variational Boundary-Value Problems.	216
	Regularity	222
6.3	The Lax-Milgram-Babuska Theorem.	223
6.4	Existence Theory in Linear Incompressible Elasticity	227
6.5	Monotone Operators	235
6.6	Variational Inequalities	248
6.7	Applications in Mechanics	252
7.	VARIATIONAL METHODS OF APPROXIMATION	257
7.1	Introduction	257
7.2	Several Variational Methods of Approximation	257
	Galerkin's Method.	260
	The Rayleigh-Ritz Method	261
	Semidiscrete Galerkin Methods.	261
	Methods of Weighted Residuals.	262
	Least Square Approximations	263
	Collocation Methods.	263
	Functional Imbeddings.	264
7.3	Finite-Element Approximations.	265
7.4	Finite-Element Interpolation Theory.	268
7.5	Existence and Uniqueness of Galerkin Approximations.	276
7.6	Convergence and Accuracy of Finite-Element Galerkin Approximations	280
