Preface

1.	Chemistry and Metabolism of Glycosaminoglycans and Proteoglycans	3
1.1	Nature and classification	3
1.2	Modern nomenclature	4
1.3	Development of terminology	5
1.4	Other related terms in literature	10
1.5	Occurrence	12
1.6	Chemical structures	14
1.7	Organization as proteoglycans and aggregates	23
1.8	Role of silicon in molecular organization of glycosaminoglycans	25
1.9	Interactions with basic compounds and cations	28
1.10	Interaction with other macromolecules	29
1.11	Biosynthesis of glycosaminoglycans and proteoglycans	32
1.12	Degradation of proteoglycans and glycosaminoglycans	35
1.13	Effects of vitamins, hormones and minerals, etc.	39
1.14	Bibliography	41
2.	General Methods for Isolation, Fractionation and Analysis	51
2.1	Introduction	51
2.2	Isolation procedures	52
2.3	Fractionation of GAG mixtures	54
2.4	Molecular weight determination	59
2.5	Fractionation by preparative electrophoresis	60
2.6	Characterization by microscopic, optical and spectrometric methods	61
2.7	Analysis without hydrolysis	63
2.8	Analysis of components in hydrolysates	64

2.9	Microfractionation and microanalysis of glycosaminoglycans in mixtures	70
2.10	Keratan sulfate determination	70
2.11	Hyaluronic acid determination	71
2.12	Determination of dermatan and chondroitin sulfates	71
2.13	Bibliography	73
3.	Biological Functions and Therapeutic Uses of Glycosaminoglycans	91
3.1	Introduction	91
3.2	Control of collagen formation and organization	92
3.3	Control of water in extracellular tissues	93
3.4	Role in urine concentrating process of kidney	95
3.5	Role in immunity, infection and inflammation	96
3.6	Role in wound healing	97
3.7	Role in eye	99
3.8	Role in central nervous system	99
3.9	Role in biological lubrication and biomechanics	100
3.10	Role in stone formation (lithiasis)	101
3.11	Role in hair growth	103
3.12	Role as ion-exchangers	104
3.13	Role in morphogenesis	106
3.14	Role in cell proliferation	106
3.15	Role in calcification	107
3.16	Therapeutic uses of glycosaminoglycans	107
3.17	Bibliography	110
4.	Gastrointestinal Tract Fluids	123
4.1	Introduction	123
4.2	Methods of analysis and fractionation	124
4.3	Gastric juice	125
4.4	Intestinal fluids	134
4.5	Aging-related changes in gastrointestinal fluids	137
4.6	Gastrointestinal changes in cystic fibrosis	137
4.7	Bibliography	139

5.	Glycosaminoglycans in Fluids and Fluid-Associated Tissues of the Oral Cavity	153
5.1	Introduction	153
5.2	Salivary apparatus and salivary secretion	153
5.3	Mucosubstances in saliva and salivary glands	156
5.4	Glycosaminoglycans of gingival fluid and gingiva	163
5.5	Glycosaminoglycans in oral cyst fluid	169
5.6	Relationship between dental plaque, periodontal disease and salivary flow	171
5.7	Age-related changes in polysaccharides of salivary glands and oral mucosa	174
5.8	Bibliography	175
6.	Mucopolysaccharides in Fluids and Fluid-Associated Membranes of Respiratory Tract	187
6.1	Introduction	187
6.2	Mucus production and mucociliary function	187
6.3	Mucopolysaccharides in nasal secretion	189
6.4	Factors affecting nature and quantity of nasal secretion	190
6.5	Nasal secretion in cystic fibrosis	191
6.6	Glycosaminoglycans of nasal and paranasal mucous membranes	192
6.7	Acidic glycosaminoglycans in paranasal sinus mucosa	193
6.8	Mucopolysaccharides in nasal and paranasal carcinoma	194
6.9	Mucopolysaccharides of sputum	195
6.10	Mucopolysaccharides in bronchial secretion	203
6.11	Factors affecting bronchial secretion	205
6.12	Bibliography	206
7.	Ocular Fluids	217
7.1	Introduction	217
7.2	Lacrimal secretion or tears	217
7.3	Aqueous humor	221
7.4	Vitreous humor	226
7.5	Subretinal fluid	231
7.6	Bibliography	234

8.	Bile	243
8.1	Physiological aspects	243
8.2	Source and functions of bile mucins	243
8.3	Mucosubstances in bile	244
8.4	Hexuronic acid conjugates in bile	247
8.5	Changes in physiological and pathological states	250
8.6	Bibliography	255
9.	Fluids Associated with Embryonic Membranes	261
9.1	Introduction	261
9.2	Wharton's jelly of umbilical cord	261
9.3	Glycosaminoglycans in Allantoic fluid	270
9.4	Glycosaminoglycans in eggs	271
9.5	Glycosaminoglycans of cardiac jelly	273
9.6	Bibliography	274
10.	Glycosaminoglycans of Fluids and Fluid-Associated Tissues of Ear	281
10.1	General consideration	281
10.2	Secretion in external ear: Cerumen	282
10.3	Pathological middle ear fluid	283
10.4	Inner ear fluids: Perilymph and endolymph	285
10.5	Source of inner ear fluids	290
10.6	Glycosaminoglycans in delicate membranes of inner ear .	291
10.7	Effects of hormones and vitamins in inner ear	295
10.8	Experimental studies in myxedema (hypothyroidism) . . .	296
10.9	Pathological glycosaminoglycan changes in the inner ear .	298
10.10	Role of glycosaminoglycans in inner ear function	301
10.11	Addendum	303
10.12	Bibliography	305
11.	Amniotic Fluid (Liquor amnii)	315
11.1	Introduction	315
11.2	Origin, volume and fate of amniotic fluid	315
11.3	Relationship of amniotic fluid to urine	318

11.4	Methods of analysis and fractionation	318
11.5	Normal glycosaminoglycan composition	325
11.6	Source of glycosaminoglycans in amniotic fluid	326
11.7	Glycosaminoglycans variation with gestational age	327
11.8	Pathological changes in amniotic fluid glycosaminoglycans	330
11.9	Amniocentesis and intrauterine diagnosis of mucopolysaccharidoses: Problems and prospects	332
11.10	Bibliography	336
12.	Synovial Fluid	345
12.1	Introduction	345
12.2	Volume and general composition	347
12.3	Glycosaminoglycan composition	348
12.4	Source of Glycosaminoglycans	351
12.5	Analytical and fractionation methods	352
12.6	Alterations in physiological and pathological states	354
12.7	Alterations in Viscosity	361
12.8	Synovial membrane in rheumatoid arthritis	362
12.9	Bibliography	363
13.	Mucopolysaccharides of Physiological and Pathological Fluid Accumulations (Effusions)	373
13.1	Introduction	373
13.2	Glycosaminoglycans in extracellular fluids of tumors	373
13.3	Blister fluids	376
13.4	Cyst fluids	376
13.5	Glycosaminoglycans of edema fluids	378
13.6	Edema fluid from sexual skin	379
13.7	Leprous infiltrates	380
13.8	Mucopolysaccharides of serous effusions	381
13.9	Bibliography	392
14.	Fluids of the Reproductive System	403
14.1	Introduction	403
14.2	Semen or seminal fluid	405

14.3	Female reproductive system	409
14.4	Bibliography	421
15.	Cerebrospinal Fluid	433
15.1	Introduction	433
15.2	Location, origin and fate of CSF	434
15.3	Glycosaminoglycans in normal CSF	435
15.4	Source of CSF glycosaminoglycans	436
15.5	Relationship of CSF glycosaminoglycans to age	437
15.7	Lysosomal GAG hydrolyzing enzymes in CSF	441
15.8	Effects of hyaluronidase injection into CSF	442
15.9	Bibliography	443
16.	Glycosaminoglycans of Blood	451
16.1	Introduction	451
16.2	Source of Plasma Glycosaminoglycans	451
16.3	Relationship between glycosaminoglycans in blood and urine	453
16.4	Methods of analysis and fractionation	455
16.5	Glycosaminoglycans of plasma and serum	459
16.6	Glycosaminoglycans of formed elements	463
16.7	Physiological and pathological variations in blood glycosaminoglycans	468
16.8	Bibliography	489
17.	Glycosaminoglycans of Urine	511
17.1	Introduction	511
17.2	Source of urinary glycosaminoglycans	513
17.3	Analysis and fractionation procedures	514
17.4	Glycosaminoglycans of normal urine	517
17.5	Nondialyzable, polymeric and dialyzable, low molecular weight fractions	518
17.6	Relationship between plasma, urine and amniotic fluid levels	520
17.7	Relationship between glycosaminoglycan and 17-hydroxycorticosteroid excretion	521

17.8	Urinary glycosaminoglycans and renal lithiasis	521
17.9	Effects of physiological factors	522
17.10	Alterations in pathological states	534
17.11	Bibliography	566
18.	Secretions of the Skin	597
18.1	General Views	597
18.2	Glycosaminoglycans in normal sweat	598
18.3	Glycosaminoglycans of sweat glands in pathological states	602
18.4	Variations with age and sex	604
18.5	Glycosaminoglycans in sebaceous secretions	605
18.6	Hormonal control of sebaceous secretion	606
18.7	Bibliography	607
19.	Other Miscellaneous Body Fluids	613
19.1	Milk	615
19.2	Interstitial fluid	616
19.3	Lymph	618
19.4	Cartilage Fluid	619
19.5	Bibliography	621
	Subject Index	623
