

Contents

Chapter 1. Development of Neurology and Neuropathology	1
Early concepts of neurological structure and function	1
Microscopy of the nervous system	3
Development of clinical neurology	3
Diagnosis and treatment of neurological disease	4
Development of modern neuropathology	4
 Chapter 2. Functional Histology and Anatomy of the Central Nervous System	 7
In collaboration with Peter J. Roberts	
Histology of the brain	7
Neurons	8
Oligodendrocytes	12
Astrocytes	13
Blood vessels of the brain, and the blood–brain barrier	13
Microglia	14
Ependyma	14
Choroid plexus	16
Anatomy of the human brain	16
Anatomy of the spinal cord	19
Basic neuroanatomy from the study of brain evolution	22
Further reading	23
 Chapter 3. The Interpretation of Neurological Symptoms and Signs	 25
Clinical localisation of brain disorders	26
Focal lesions	26
Synopsis of regional functions in the cerebral hemispheres	26
Disorders of the cerebellum and basal ganglia	28
Clinical effects of lesions of the mid-brain, pons and medulla	29
Interaction between focal and generalised effects of intracranial lesions	29
Altered states of consciousness	30
States of arousal	30
Discrepancies between apparent state of arousal and content of consciousness	31
Epilepsy	32
Headache	33
Raised intracranial pressure	33
Spinal cord lesions	33
Extrinsic lesions	34
Intrinsic lesions	34
Pain	34
Radiology	34

Peripheral nerve disease	35
Symptoms	35
Autonomic disturbances	35
Distribution of symptoms and signs	36
Investigation of peripheral neuropathy	36
Correlation of clinical findings, electromyography and biopsy	37
Conclusion	37
Further reading	37
 Chapter 4. General Pathology of the Central Nervous System	 39
Reactions of brain cells to disease processes	40
Neurons	40
Astrocytes	44
Microglia	45
Reactions to brain tissue damage	45
Inflammation and repair	45
Breakdown of the blood–brain barrier, and cerebral oedema	46
Breakdown of myelin	47
Multiple sclerosis	48
The secondary effects of intracranial space-occupying lesions and cerebral oedema	51
Hydrocephalus	52
Further reading	55
 Chapter 5. Cerebral Vascular Disease	 57
In collaboration with John D. Pickard	
Stroke	57
Clinical features	58
Clinical classification	58
Embolism and cerebral infarction	59
Arterial occlusion	60
Large and small vessel disease in cerebral infarction	61
Risk factors	62
Epidemiology	62
Treatment	63
Vascular territories and infarction	63
Physiological aspects of the cerebral circulation	64
Cerebral infarcts	66
Sequence of histological changes after cerebral infarction	68
Blood flow changes after cerebral infarction	68
Lacunes	68
Carotid artery territory infarction	68
Vertebro–basilar territory infarction	69
Boundary zone infarction	70
Death due to hypotensive brain damage	70
Hypoxic encephalopathy	72
Spinal cord infarction	72
Venous infarction	73

Intracranial haemorrhage	74
Hypertensive cerebral and cerebellar haemorrhage	74
Subarachnoid haemorrhage	76
Cerebral tumour and cerebral haemorrhage	83
Further reading	83
Chapter 6. Trauma to the Nervous System	85
In collaboration with Jason Brice	
Head injuries	85
Blunt head injuries	86
Pathology of blunt head injuries	89
Penetrating head injuries	96
Spinal cord trauma	96
Pathology of spinal cord injuries	98
Prospectus	99
Chronic and recurrent trauma to the nervous system	100
Nerve root compression, and traumatic radiculopathies	100
Root and cord lesions in spondylosis	101
Spinal cord and nerve root compression by tumour or infection	101
Radiation myelopathy and encephalopathy	102
Further reading	102
Chapter 7. Intracranial and Spinal Tumours	105
In collaboration with John S. Garfield	
Classification	106
Incidence of intracranial and spinal tumours	108
Clinical presentation of intracranial tumours	110
Diagnosis of intracranial tumours	111
Intracranial tumours of neuro-epithelial origin	112
Astrocytomas	113
Glioblastomas and anaplastic astrocytomas	115
Oligodendrogliomas	120
Ependymomas	121
Medulloblastomas	123
Choroid plexus papillomas	123
Colloid cysts of the third ventricle	124
Tumours of nerve sheath cells	125
Schwannomas	125
Neurofibromas	126
Meningiomas	126
Primary malignant lymphomas of the brain	128
Tumours and malformations of blood vessel origin	129
Haemangioblastomas	129
Capillary telangiectases	130
Cavernous angiomas	130
Arteriovenous malformations	130

Tumours of the pituitary	130
Tumours of the pineal	130
Metastatic intracranial tumours	131
Spinal tumours	132
Classification	132
Clinical presentation, investigation and treatment	133
Pathology	133
Further reading	134
Chapter 8. Pituitary Tumours	135
In collaboration with Nicholas F. Lawton	
Pituitary adenomas	135
Clinical aspects	135
Histopathology	138
Craniopharyngiomas and suprasellar cysts	141
Pathology	143
Further reading	143
Chapter 9. Virus Infections of the Nervous System	145
In collaboration with Marie M. Ogilvie	
Clinical aspects and pathology	145
Viral meningitis	145
Viral encephalitis	146
Post-infectious encephalitis	147
Reye's syndrome	148
Viruses with specific neurotropic characteristics	148
Viruses and polyneuropathy	148
Slow virus encephalitis	148
Virology of nervous system infections	150
Viral replication	150
Defences against viral infection	151
Viruses associated with CNS infections	151
Virological investigations in CNS infections	152
Meningitis and paralytic disease	152
Herpes simplex meningitis	153
Investigation of encephalitis	153
Post-infectious encephalitis	153
<i>Mycoplasma pneumoniae</i> infections	153
Acute encephalitis	153
Herpes simplex encephalitis	154
Diagnosis of other viral encephalitides	158
Slow virus encephalitis	158
Further reading	158

Chapter 10. Bacterial, Fungal and Parasitic Infections of the Central Nervous

System	159
In collaboration with Elizabeth T. Houang	
Bacterial infections	159
Bacterial meningitis	159
Clinical features	160
Chronic or subacute forms	160
Late complications	160
CSF examination	161
Bacteriology of meningitis	162
Pathology of bacterial meningitis	163
Tuberculous meningitis and tuberculomas	165
Neurosyphilis	167
Shunt-associated meningitis	168
Fungal meningitis	168
Other causes of meningitis	169
Intracranial abscess	169
Subdural abscess	169
Brain abscess	169
Mycotic aneurysms	172
Protozoal infections	172
Metazoal parasites	173
Further reading	173

Chapter 11. Developmental and Neonatal Neuropathology

Epidemiology	175
Antenatal factors	176
Perinatal factors	176
Postnatal developmental disability	176
Pathogenetic considerations	177
Development of the human brain	177
Chromosomal abnormalities	178
Down's syndrome (mongolism)	178
Trisomy 17–18 (trisomy E; Edwards' syndrome)	179
Trisomy 13–15 (trisomy D; Patau's syndrome)	180
Destructive lesions	180
Infections	180
Porencephaly and hydranencephaly	183
Chemical agents and CNS malformations	184
Radiation	184
Dysraphic malformations	185
Anencephaly	185
Encephalocoeles	186
Spina bifida dorsalis	186
Arnold–Chiari malformation	189
Dandy–Walker malformation	190
Hydrocephalus	190
Syringomyelia	191

Perinatal brain injuries	192
Birth trauma	192
Cerebral trauma in neonates	193
Hypoxia	194
Kernicterus: bilirubin encephalopathy	195
Neonatal infections	195
The phakomatoses	195
Neurofibromatosis	196
Tuberose sclerosis	197
Von Hippel–Lindau’s disease	198
Sturge–Weber syndrome	198
Ataxia–telangiectasia	198
Other phakomatoses	198
Pathology of metabolic disorders of the brain	198
Pathology of inborn lysosomal storage disorders	199
Neuronal storage disorders	199
Leukodystrophies	200
Mucopolysaccharidoses	201
Further reading	201
 Chapter 12. Metabolic Disorders Affecting the Nervous System	 203
By Barbara E. Clayton	
Neonatal hypothyroidism	203
Phenylketonuria	204
Disorders of the branched chain amino acids	207
Maple syrup urine disease	208
β -Methylcrotonyl CoA carboxylase deficiency	208
Disorders of sulphur metabolism	208
Urea cycle disorders	208
Carbohydrate disorders	209
Galactosaemia	209
Disorders of fructose metabolism	210
Glycogen storage disorders	210
Inherited disorders of trace metal metabolism	210
Wilson’s disease	211
Menkes’ disease	211
Diagnosis of inherited disorders of sick infants	211
References	212
 Chapter 13. Inborn Lysosomal Storage Disorders Affecting the Nervous System	 215
By Paul D. Whiteman	
Lysosomes and lysosomal storage disorders	215
Lysosomal disorders affecting the nervous system	216
The mucopolysaccharidoses	216
The lipidoses	221
The gangliosidoses	221
Metachromatic leukodystrophy (MLD)	222

Krabbe leukodystrophy	223
Fabry disease (angiokeratoma corporis diffusum)	223
Gaucher disease	224
Niemann–Pick disease	224
Ophthalmoplegic lipidoses	224
Farber’s lipogranulomatosis	225
The mucopolipidoses	225
Austin sulphatidosis	225
I-cell disease	225
Mucopolipidosis type IV	225
Other lysosomal disorders affecting the nervous system	225
Mannosidosis	225
Fucosidosis	225
Aspartyl-glycosaminuria	226
Aids to diagnosis of lysosomal disorders	226
Management of lysosomal disorders	226
References	227
 Chapter 14. Hereditary and System Disorders of the Nervous System	229
Clinical features	230
Hereditary system degenerations	231
Hereditary spastic paraplegia (Strümpell)	231
Hereditary posterior column ataxia (Biemond)	231
Charcot–Marie–Tooth disease (peroneal muscular atrophy)	231
Friedreich’s ataxia	232
Spinocerebellar atrophies	233
Cortical cerebellar atrophy	233
Olivopontocerebellar atrophy	233
Shy–Drager syndrome	234
Basal ganglia disorders	235
Acquired system degenerations	235
Subacute combined degeneration of the cord	236
Acquired cerebellar degenerations	236
Acquired basal ganglia degenerations	238
Striato-nigral degeneration	241
Progressive supranuclear palsy	242
Stiff man syndrome	242
Further reading	242
 Chapter 15. Dementia	243
Epidemiology	244
Causes	244
Alzheimer’s disease	245
Multi-infarct dementia	251
Coexistence of Alzheimer’s dementia and multi-infarct dementia	252
Pick’s disease	253

Progressive subcortical gliosis	254
Huntington's disease	254
Creutzfeldt–Jakob disease (subacute spongiform encephalopathy)	255
The amnesic syndrome	257
Wernicke–Korsakoff syndrome	257
Intermittently raised pressure hydrocephalus (IRPH)	258
Further reading	259
 Chapter 16. Diseases of Peripheral Nerve	 261
Nerve biopsy	262
Autopsy study of peripheral neuropathies	262
Techniques for peripheral nerve histology	262
Anatomy of peripheral nerves	264
Histology of peripheral nerves	264
Development and ageing of peripheral nerves	266
General pathology of peripheral nerves	267
Axon (wallerian) degeneration and regeneration	267
Segmental demyelination	269
Hypertrophic neuropathy	273
Peripheral nerve diseases	274
Destructive lesions of the spinal cord	275
Diseases affecting motor neurons	275
Diseases of sensory ganglia	276
Traumatic and compressive nerve lesions	276
Neuropathies due to vascular disease	277
Toxic neuropathies	277
Metabolic neuropathies	280
Amyloid neuropathy	281
Inflammatory disorders of peripheral nerves	281
Peroneal muscular atrophy and hypertrophic neuropathy	283
Disorders of lipid metabolism	283
Neuropathies in malignant disease	285
Autonomic neuropathies	285
Further reading	285
 Chapter 17. Diseases of Muscle	 287
Muscle biopsy technique	287
Histological features of neuromuscular disease	290
Statistical methods	291
Degenerative changes	293
Regenerative changes	301
Other features	301
Classification of neuromuscular disorders	302
Myopathic disorders	302
Muscular dystrophies	302
Congenital myopathies	306
Myotonic syndromes	309

Metabolic myopathies	311
Endocrine myopathies	314
End-plate disorders	314
Inflammatory myopathies	316
Neurogenic disorders	317
Spinal muscular atrophies	317
Motor neuron disease	319
Other anterior horn cell disorders and other diseases causing denervation of muscle	320
Further reading	320
Appendix	322
Subject Index	323
