

LANDOLT-BÖRNSTEIN

Zahlenwerte und Funktionen
aus Naturwissenschaften und Technik

Neue Serie

Gesamtherausgabe: K.-H. Hellwege

Gruppe III: Kristall- und Festkörperphysik

Band 12

Ergänzung und Erweiterung zu Band 4

Magnetische und andere Eigenschaften
von Oxiden und verwandten Verbindungen

Teil c

Hexagonale Ferrite · Spezielle Lanthaniden-
und Actinidenverbindungen

R.R. Arons · D. Bonnenberg · P. Grünberg
K.A. Hempel · U. Köbler · H. Lütgemeier
H.J. Maletta · W. Roos · Ch. Sauer · W. Zinn

Herausgeber: K.-H. Hellwege und A.M. Hellwege

Springer-Verlag Berlin · Heidelberg · New York 1982

Table of contents

5 Hexagonal ferrites

(D. BONNENBERG, K. A. HEMPEL, W. ROOS)

5.0	Introduction	1
5.1	Quantities and units	1
5.2	List of symbols and abbreviations	5
5.3	Chemical compositions and phase diagrams of hexagonal ferrites (see Vol. III/4b, p. 555)	6
5.4	Crystal structures (see Vol. III/4b, p. 557)	6
5.5	Paramagnetic properties of ferrites with hexagonal crystal structure	6
5.6	M(magnetoplumbite)-type ferrites	7
5.6.1	Survey of the chemical substitution in the M structure and room temperature lattice constants	7
5.6.2	Electric and dielectric properties of ferrites with M structure	10
5.6.3	Mössbauer spectra, saturation magnetization and Curie temperature of ferrites with M structure	10
5.6.4	Effective spectroscopic splitting factor g_{eff} of ferrites with M structure (see Vol. III/4b, p. 573)	14
5.6.5	Magneto-crystalline anisotropy of ferrites with M structure	14
5.6.6	Hysteresis properties of ferrites with M structure	16
5.6.7	High-frequency magnetic properties of ferrites with M structure	17
5.6.8	Magnetic domains	19
5.7	W-type ferrites	20
5.7.1	Survey of chemical substitutions in the W structure	20
5.7.2	Electric and dielectric properties of ferrites with W structure	21
5.7.3	Saturation magnetization, Curie temperature and Mössbauer spectra of ferrites with W structure	21
5.7.4	Effective spectroscopic splitting factor g_{eff} of ferrites with W structure (see Vol. III/4b, p. 588)	23
5.7.5	Magneto-crystalline anisotropy of ferrites with W structure	23
5.7.6	Magnetostriction of ferrites with W structure	23
5.7.7	High-frequency magnetic properties of ferrites with W structure	23
5.8	Y-type ferrites	24
5.8.1	Survey of chemical substitutions in the Y structure	24
5.8.2	Electric and dielectric properties of ferrites with Y structure	25
5.8.3	Mössbauer spectra and saturation magnetization of ferrites with Y structure	25
5.8.4	Magneto-crystalline anisotropy of ferrites with Y structure	25
5.8.4.1	Magneto-crystalline anisotropy derived from static measurements	25
5.8.4.2	Magneto-crystalline anisotropy field derived from ferromagnetic resonance frequency	26
5.8.5	Hysteresis properties of ferrites with Y structure	27
5.8.6	High-frequency magnetic properties of ferrites with Y structure	28
5.8.6.1	Magnetic spectrum of the initial permeability of ferrites with Y structure	28
5.8.6.2	Ferrimagnetic resonance properties of ferrites with Y structure	29
5.8.6.3	Non-linear effects in the ferromagnetic resonance of ferrites with Y structure (see Vol. III/4b, p. 603)	29
5.9	Z-type ferrites	29
5.9.1	Survey of chemical substitution in the Z structure	29
5.9.2	The resistivity of ferrites with Z structure	30
5.9.3	Saturation magnetization and Curie temperature of ferrites with Z structure	30
5.9.4	Magneto-crystalline anisotropy of ferrites with Z-structure	32
5.9.5	High-frequency magnetic properties of ferrites with Z structure	32
5.10	U-type ferrites	32
5.11	Calcium ferrites	33

5.12 X-type ferrites	34
5.13 F-type ferrites	34
5.14 $\text{KFe}_{11}\text{O}_{17}$	35
5.15 Further hexagonal ferrites	36
5.16 References for 5	37

6 Compounds with lanthanide and actinide elements of some special structure types

6.0 Introduction (W. ZINN)	47
6.0.1 General remarks	47
6.0.2 Arrangement of tables and figures	48
6.0.3 List of frequently used abbreviations and symbols; magnetic fields and units	50
6.0.3.1 Abbreviations	50
6.0.3.2 Symbols and units	52
6.0.3.3 Magnetic fields and units	55
6.0.4 General references	57
6.1 Rare earth compounds with elements of group V (N, P, As, Sb, Bi)	59
6.1.0 Introduction to rare earth compounds (W. ZINN)	59
6.1.0.1 General remarks	59
6.1.0.2 Special properties of rare earth compounds	63
6.1.1 NaCl-type compounds (P. GRÜNBERG, H.J. MALETTA)	67
6.1.1.1 Crystallographic, magnetic, optical, electrical, thermal, and mechanical properties of NaCl-type compounds	67
6.1.1.2 Crystal field data	88
6.1.2 Crystallographic, magnetic, optical, and electrical properties of compounds with miscellaneous structures and compositions (P. GRÜNBERG, H.J. MALETTA)	151
6.1.3 References for 6.1.1 and 6.1.2 (P. GRÜNBERG, H.J. MALETTA)	155
6.2 Rare earth compounds with elements of group VI (O, S, Se, Te) (U. KÖBLER, CH. SAUER)	159
6.2.1 NaCl-type compounds	159
6.2.1.1 Crystallographic, magnetic, optical, electrical, thermal, and mechanical properties of NaCl-type compounds with divalent rare earth elements	159
6.2.1.2 Exchange constants, g-factors, anisotropy constants, crystal field parameters, hyperfine fields, elastic constants, Debye temperatures, melting points, optical data in Eu-monochalcogenides	168
6.2.1.3 Critical data of Eu-monochalcogenides	173
6.2.1.4 Crystallographic, magnetic, optical, electrical, thermal, and mechanical properties of NaCl-type compounds with trivalent rare earth elements	175
6.2.1.5 Crystallographic, magnetic, electrical, optical, thermal, and mechanical properties of ternary systems with NaCl-type structure	184
6.2.2 Th_3P_4 -type compounds	267
6.2.2.1 Crystallographic, magnetic, optical, electrical, thermal, and mechanical properties of binary compounds with Th_3P_4 -type crystal structure ($\text{I}\bar{4}3\text{d} - \text{T}_\text{d}^6$)	267
6.2.2.2 Crystallographic, magnetic, electrical, and thermal properties of ternary compounds with Th_3P_4 -type crystal structure ($\text{I}\bar{4}3\text{d} - \text{T}_\text{d}^6$)	289
6.2.3 Crystallographic, magnetic, optical, electrical, thermal, and mechanical properties of trivalent and tetravalent oxides with structures derived from the CaF_2 -type crystal lattice	293
6.2.4 Crystallographic, magnetic, optical, electrical, and thermal properties of miscellaneous compounds	349
6.2.5 References for 6.2	359
6.3 Rare earth hydrides (R. R. ARONS)	372
6.3.1 Rare earth hydrides with CaF_2 - and BiF_3 -type structures	372
6.3.1.1 Range of homogeneity for RE hydrides with CaF_2 - and BiF_3 -type structures	372
6.3.1.2 Crystallographic, magnetic, and electrical properties of CaF_2 - and BiF_3 -type RE-H systems	373
6.3.1.3 Crystal-field ground state of RE ions in CaF_2 -type RE hydrides	384

6.3.2	REH ₃ alloys with the h.c.p. structure	381
6.3.3	Dihydrides of Eu and Yb (orthorhombic structure)	383
6.3.4	References for 6.3	404
6.4	Actinide compounds with elements of group V	406
6.4.0	Introduction to actinide compounds (W. ZINN)	406
6.4.1	Crystallographic, magnetic, and electrical properties of NaCl-type compounds (R. R. ARONS)	410
6.4.2	Crystallographic, magnetic, and electrical properties of actinide pnictides with miscellaneous structures (R. R. ARONS)	438
6.4.3	References for 6.4.1 and 6.4.2 (R. R. ARONS)	445
6.5	Actinide compounds with elements of group VI (O, S, Se, Te) (H. LÜTGEMEIER)	448
6.5.1	Crystallographic, magnetic, and electrical properties of chalcogenides with NaCl-type structure	448
6.5.2	Crystallographic, magnetic, and electrical properties of CaF ₂ -type oxides	451
6.5.3	Crystallographic, magnetic, and electrical properties of oxides with miscellaneous structures	453
6.5.3.1	Crystallographic data of binary uranium oxides	453
6.5.3.2	Magnetic and electrical properties of uranium oxides	454
6.5.4	Crystallographic, magnetic, and electrical properties of chalcogenides with miscellaneous structures	455
6.5.5	Crystallographic, magnetic, and electrical properties of ternary compounds	459
6.5.6	References for 6.5	482
7	Index of substances for subvolumes 4a, b and 12a, b, c	485
