

Contents

I. General Problems of Statistical Nonequilibrium Thermodynamics

Statistical Thermodynamics of Nonlinear Irreversible Processes
F. M. Kuni, L. Z. Adjemian, A. P. Grinin, T. Yu. Novozhilova,
B. A. Storonkin 3

Thermodynamical Approach to the Analysis of Statistical Properties
of Nonlinear Dynamic Systems
A. A. Platonov 19

The Problem of Entropy Increase and Stability of Motion in
Quantum Mechanics
O. D. Chernavskaya, D. S. Chernavsky 35

On the Relation Between the H-Theorem and the Principle of
Minimum Entropy Production
H. Hasegawa 55

II. Phase Transitions and Nonequilibrium Fluctuations

Nonequilibrium Phase Transition in Chemical Systems
M. Malek-Mansour, G. Nicolis, I. Prigogine 75

Synergetics. Nonequilibrium Phase Transitions and
Selforganization in Biological Systems
H. Haken 105

Brownian Motion in Autooscillation Systems and in
Phase Transition Processes
Yu. L. Klimontovich 125

Nonequilibrium Fluctuations and Irreversible Processes Far from Thermal Equilibrium

H. Furukawa	151
-----------------------	-----

III. Kinetic Equations

Generalized Fokker-Planck Equation in the Theory of Irreversible Processes

D. N. Zubarev	169
-------------------------	-----

The Diffusion Approximation for Markov Processes

N. G. van Kampen	181
----------------------------	-----

Extremal Principles and Catastrophe Theory for Stochastic Models of Nonlinear Irreversible Processes

W. Ebeling, H. Engel-Herbert	197
--	-----

IV. The Problem of Phenomenological Nonequilibrium Thermodynamics

Irreversible Thermodynamics far from Equilibrium

L. I. Rozonoer	219
--------------------------	-----

On the Structuring of Thermodynamic Fluxes:

A Direct Implementation of the Dissipation Inequality

J. Bataille, D. G. B. Edelen, J. Kestin	239
---	-----

Axiomatic Models of Phenomenological Thermodynamics

E. V. Presnov, S. N. Malyghin	255
---	-----

Axiomatic Approach to Irreversible Thermodynamics and Variational Principles

I. P. Virodov	265
-------------------------	-----

The Second Lyapunov Method and The Variational Principle

V. N. Kapranov, A. I. Lopushanskaya	279
---	-----

V. Ecology and Populations

The Rate of Correlation Decay in One-Dimensional Ecological Models

L. A. Bunimovich, Ja. G. Sinay 297

Kinetics of Nonequilibrium Processes and Ecology

V. V. Alekseev 309

Mathematical Modelling of Biocenosis on the Basis of

Haldane-Semevsky Principle

G. E. Insarov, S. M. Semenov 315

Natural Selection and Optimality Principles

M. A. Khanin, N. L. Dorfman 325

Statistical Thermodynamic Model of Stationary Population

A. K. Prits 337

VI. Reaction of Organisms to External Factors

Effects of External Influences on the Types of Transition Processes
Observed in the Energy Metabolism of Organisms

V. A. Grudnitsky† 347

Rate of Temperature Adaptation of Respiratory Metabolism in
Soil Invertebrates

Yu. B. Byzova 359

Relationship Between Maximal Metabolism, Body Weight and
Standard Metabolism of Animals

G. V. Dontsova, A. I. Zotin 369

Kinetics of Transition Processes in Living Systems -
Load, Adaptation, Stability

E. Z. Rabinovich 387

Dynamic Characteristics of Heat and Water Exchange in Man	
A. A. Glushko	397
Relation of Stimuli Controlling Lung Ventilation During Transient and Stable Periods of Exercise	
I. S. Breslav, G. G. Isaev, A. M. Shmeleva	413
VII. Ontogenesis	
Kinetics of Constitutive Processes During Development and Growth of Organisms	
R. S. Zotina, A. I. Zotin	423
Stochastic Description of Growth and Aging in Animals	
V. I. Timonin, R. S. Zotina	437
Thermodynamic Estimation of Development and Growth of Microorganisms	
V. V. Koryagin, S. A. Konovalov	445
Transition Process in Ontogenesis as a Characteristics of Changes in the Stability of Animals to External Influences	
V. V. Lapkin	453
On Specific Peculiarities of Transition Processes in Ontogenesis of Mammals	
I. A. Arshavsky	461
Stable Orbitals and Transition Processes in the Models of Biological Systems	
V. A. Vasiliev, Yu. M. Romanovsky	473
Concluding Remarks	487
References	489
Index	531
