|---------------------------------------------------------------------------------------------------------------------|------|
| Foreword . . . . .                                                                                                  | V    |
| Preface . . . . .                                                                                                   | 1    |
| § 1. Notation. . . . .                                                                                              | 3    |
| § 2. Semigroups . . . . .                                                                                           | 4    |
| § 3. Strings . . . . .                                                                                              | 5    |
| § 4. Semigroup strings with restrictions . . . . .                                                                  | 7    |
| § 5. Ordered semigroup strings with restrictions . . . . .                                                          | 10   |
| § 6. Strings on rings . . . . .                                                                                     | 11   |
| § 7. Indeterminate strings . . . . .                                                                                | 14   |
| § 8. Indeterminate strings with restrictions . . . . .                                                              | 21   |
| § 9. Restricted degree and order for indeterminate strings . . . . .                                                | 26   |
| §10. Indexing strings. . . . .                                                                                      | 29   |
| §11. Nets . . . . .                                                                                                 | 31   |
| §12. Semigroup nets with restrictions . . . . .                                                                     | 33   |
| §13. Ordered semigroup nets with restrictions . . . . .                                                             | 36   |
| §14. Nets on rings . . . . .                                                                                        | 37   |
| §15. Indeterminate nets . . . . .                                                                                   | 39   |
| §16. Indeterminate nets with restrictions . . . . .                                                                 | 46   |
| §17. Restricted degree and order for indeterminate nets. . . . .                                                    | 53   |
| §18. Prechips. . . . .                                                                                              | 57   |
| §19. Isobars for prechips and Premonic polynomials . . . . .                                                        | 59   |
| §20. Substitutions . . . . .                                                                                        | 67   |
| §21. Substitutions with restrictions . . . . .                                                                      | 73   |
| §22. Coordinate nets and Monic polynomials . . . . .                                                                | 82   |
| §23. Graded ring of a ring at an ideal . . . . .                                                                    | 85   |
| §24. Graded ring of a ring . . . . .                                                                                | 88   |
| §25. Graded rings at strings and nets and the notions of separatedness and regularity for strings and nets. . . . . | 90   |
| §26. Inner products and further notions of separatedness and regularity for strings . . . . .                       | 104  |
| §27. Inner products and further notions of separatedness and regularity for nets. . . . .                           | 109  |
| §28. Weighted isobars and weighted initial forms . . . . .                                                          | 113  |

|      |                                                               |     |
|------|---------------------------------------------------------------|-----|
| §29. | Initial forms for regular strings. . . . .                    | 126 |
| §30. | Initial forms for regular strings and nets . . . . .          | 150 |
| §31. | Protochips and parachips . . . . .                            | 161 |
| §32. | N-support of an indexing string for $2 \leq N \leq 6$ . . . . | 162 |
| §33. | Prescales. . . . .                                            | 163 |
| §34. | Derived prescales . . . . .                                   | 165 |
| §35. | Supports of prescales . . . . .                               | 167 |
| §36. | Protoscales. . . . .                                          | 168 |
| §37. | Inner products for protoscales . . . . .                      | 170 |
| §38. | Scales and isobars . . . . .                                  | 171 |
| §39. | Properties of derived prescales . . . . .                     | 176 |
| §40. | Isobars for derived scales . . . . .                          | 203 |
| §41. | Isobars and initial forms for scales . . . . .                | 205 |
| §42. | Initial forms for scales and regular nets . . . . .           | 214 |
| §43. | Isobars for protochips . . . . .                              | 220 |
| §44. | Initial forms for protochips and monic polynomials . .        | 221 |
|      | Index of definitions . . . . .                                | 225 |
|      | Index of notations . . . . .                                  | 226 |
