

Contents

Chapter 1

Introduction and Examples	1
1.1. Definition of Bifurcation Surface	1
1.2. Examples with One Parameter	3
1.3. The Euler–Bernoulli Rod	5
1.4. The Hopf Bifurcation	9
1.5. Some Generic Examples	12
1.6. Dynamic Bifurcation	15

Chapter 2

Elements of Nonlinear Analysis	19
2.1. Calculus	19
2.2. Local Implicit Function Theorem	24
2.3. Global Implicit Function Theorem	27
2.4. Alternative Methods	30
2.5. Embedding Theorems	34
2.6. Weierstrass Preparation Theorem	36
2.7. The Malgrange Preparation Theorem	43
2.8. Newton Polygon	45
2.9. Manifolds and Transversality	51
2.10. Sard's Theorem	54
2.11. Topological Degree, Index of a Vector Field and Fixed Point Index	65
2.12. Ljusternik–Schnirelman Theory in $\mathbb{R}^n$	78
2.13. Bibliographical Notes	85

Chapter 3

Applications of the Implicit Function Theorem	89
3.1. Existence of Solutions of Ordinary Differential Equations	89
3.2. Admissible Classes in Ordinary Differential Equations	90
3.3. Global Boundary Value Problems for Ordinary Differential Equations	92
3.4. Hopf Bifurcation Theorem	98
3.5. Liapunov Center Theorem	99

3.6. Saddle Point Property	102
3.7. The Hartman–Grobman Theorem	108
3.8. An Elliptic Problem	110
3.9. A Hyperbolic Problem	112
3.10. Bibliographical Notes	113

Chapter 4

Variational Method	115
4.1. Introduction	115
4.2. Weak Lower Semicontinuity	115
4.3. Monotone Operators	124
4.4. Condition (C)	129
4.5. Minimax Principle in Banach Spaces	134
4.6. Mountain Pass Theorem	140
4.7. Periodic Solutions of a Semilinear Wave Equation	142
4.8. Ljusternik–Schnirelman Theory on Banach Manifolds	147
4.9. Stationary Waves	151
4.10. The Krasnoselski Theorems	157
4.11. Variational Property of Bifurcation Equation	160
4.12. Liapunov Center Theorem at Resonance	162
4.13. Bibliographical Notes	166

Chapter 5

The Linear Approximation and Bifurcation	168
5.1. Introduction	168
5.2. Eigenvalues of B	169
5.3. Eigenvalues of (B, A)	174
5.4. Eigenvalues of $(B, A_1, \dots, A_N)$	177
5.5. Bifurcation from a Simple Eigenvalue	186
5.6. Applications of Simple Eigenvalues	191
5.7. Bifurcation Based on the Linear Equation	201
5.8. Global Bifurcation	206
5.9. An Application to a Delay Differential Equation	209
5.10. Bibliographical Notes	213

Chapter 6

Bifurcation with One Dimensional Null Space	215
6.1. Introduction	215
6.2. Quadratic Nonlinearities	217
6.3. Applications	222
6.4. Cubic Nonlinearities	226
6.5. Applications	230
6.6. Bifurcation from Known Solutions	233

6.7. Effects of Symmetry	236
6.8. Universal Unfoldings	241
6.9. Bibliographical Notes	242

Chapter 7

Bifurcation with Higher Dimensional Null Spaces	244
7.1. Introduction	244
7.2. The Quadratic Revisited	245
7.3. Quadratic Nonlinearities I	248
7.4. Quadratic Nonlinearities II	258
7.5. Cubic Nonlinearities I	263
7.6. Cubic Nonlinearities II	270
7.7. Cubic Nonlinearities III	274
7.8. Bibliographical Notes	279

Chapter 8

Some Applications	284
8.1. Introduction	284
8.2. The von Kármán Equations	284
8.3. The Linearized Problem	286
8.4. Noncritical Length	288
8.5. Critical Length	290
8.6. An Example in Chemical Reactions	294
8.7. The Duffing Equation with Harmonic Forcing	301
8.8. Bibliographical Notes	309

Chapter 9

Bifurcation near Equilibrium	311
9.1. Introduction	311
9.2. Center Manifolds	312
9.3. Autonomous Case	323
9.4. Periodic Case	329
9.5. Bifurcation from a Focus	334
9.6. Bibliographical Notes	343

Chapter 10

Bifurcation of Autonomous Planar Equations	349
10.1. Introduction	349
10.2. Periodic Orbit	349
10.3. Homoclinic Orbit	353

10.4.	Closed Curve with a Saddle-Node	360
10.5.	Remarks on Structural Stability and Bifurcation	362
10.6.	Remarks on Infinite Dimensional Systems and Turbulence	365
10.7.	Bibliographical Notes	367

Chapter 11

Bifurcation of Periodic Planar Equations		368
11.1.	Introduction	368
11.2.	Periodic Orbit-Subharmonics	369
11.3.	Homoclinic Orbit	378
11.4.	Subharmonics and Homoclinic Points	388
11.5.	Abstract Bifurcation near a Closed Curve	395
11.6.	Bibliographical Notes	397

Chapter 12

Normal Forms and Invariant Manifolds.		401
12.1.	Introduction	401
12.2.	Transformation Theory and Normal Forms	402
12.3.	More on Normal Forms	410
12.4.	The Method of Averaging	420
12.5.	Integral Manifolds and Invariant Tori	425
12.6.	Bifurcation from a Periodic Orbit to a Torus	432
12.7.	Bifurcation of Tori	439
12.8.	Bibliographical Notes	441

Chapter 13

Higher Order Bifurcation near Equilibrium		443
13.1.	Introduction	443
13.2.	Two Zero Roots I	444
13.3.	Two Zero Roots II	450
13.4.	Two Zero Roots III	458
13.5.	Several Pure Imaginary Eigenvalues	462
13.6.	Bibliographical Notes	465

Chapter 14

Perturbation of Spectra of Linear Operators		467
14.1.	Introduction	467
14.2.	Continuity Properties of the Spectrum	468
14.3.	Simple Eigenvalues	473

Contents	XV
14.4. Multiple Normal Eigenvalues	481
14.5. Self-adjoint Operators	485
14.6. Bibliographical Notes	489
 Bibliography	 491
Index	513
