

Contents

1	Introduction	1
1.1	Histology of the Osteophytes	8
2	Biomechanics of the Normal Static and Dynamic Hip	13
2.1	Static	13
2.1.1	Centre of Gravity S_4 : Bipedal Support	13
2.1.2	Centre of Gravity S_5 : Monopodal Support	13
2.1.3	Force of Abductors (M): Magnitude and Direction of Resultant Force R	14
2.1.4	“Sourcil”	20
2.1.5	“Gothic Arch”	23
2.1.6	“Hourglass”	24
2.1.7	Spherical Sector	26
2.1.8	Centre of Stress	31
2.2	Dynamic	39
2.2.1	Division of Gait into 26 and 31 Phases: Path of Centre of Gravity S_6 (FISCHER)	39
2.2.2	Path of Centre of Gravity S_5 (PAUWELS)	41
3	Biomechanics of the Osteoarthritic Hip	67
3.1	Effect of Inclination of the Weight-Bearing Surface on the Magnitude and Direction of the Component Forces of Forces R and R_1	67
3.1.1	Craniolateral Inclination	67
3.1.2	Craniomedial Inclination	82
4	Classification of Osteoarthritis of the Hip	89
4.1	Etiology	89
4.1.1	Mechanical	89
4.1.2	Metabolic	90
4.1.3	Combined	90
4.2	Morphology	98
4.2.1	Superolateral	98
4.2.2	Concentric	98
4.2.3	Medial	98
4.2.4	Inferomedial	98

4.3	Biological Reaction	98
4.3.1	Atrophic	99
4.3.2	Normotrophic	99
4.3.3	Hypertrophic	99
4.4	Range of Motion	99
5	Pathogenesis of Superolateral Types a), b) and c) Osteoarthritis	109
5.1	Anterocranial Inclination of the Weight-Bearing Surface	109
5.1.1	Locating CR , CR_1 and CS from X-ray of a Deformed Elliptical Femoral Head	130
5.2	Osteophytes	142
5.2.1	Positive Tension Osteophytes	142
5.2.2	Negative Tension Osteophyte	143
5.2.3	Fatigue Fractures of Osteophytes	144
6	Therapy of Superolateral Types b) and c) and Medial Osteoarthritis	167
6.1	Valgus-Extension Osteotomy	167
6.1.1	Effect of Valgus-Extension Osteotomy	167
6.1.2	Indications for Valgus-Extension Osteotomy	178
6.1.3	Evolution of the Technique of Valgus Osteotomy	178
6.1.4	Aims of Present Operation	179
6.1.5	How to Plan a Valgus-Extension Osteotomy	179
6.1.6	Present Operation Technique	180
6.1.7	Postoperative Treatment	183
6.2	Effect of Valgus Osteotomy on the Knee	213
6.3	Results of Osteotomy for Superolateral Osteoarthritis	217
6.3.1	Cases of Superolateral Type b)	217
6.3.2	Cases of Superolateral Type c)	217
6.3.3	Statistics on Superolateral Type b)	217
6.3.4	Statistics on Mechanical, Superolateral Type c)	218
6.4	Results of Osteotomy for Medial Types a) and b) Osteoarthritis	218
7	Acetabuloplasty and Pelvic Osteotomy	269
7.1	Surgical Technique	269
7.2	Results	270
7.3	Statistics	270
7.3.1	Simple Pelvic Osteotomy	270
7.3.2	Pelvic Osteotomy Combined with Intertrochanteric Osteotomy	270
8	Therapy of Superolateral Type a) and Concentric Osteoarthritis	283
8.1	Varus and Varus-Extension Osteotomy	283

8.1.1	How to Calculate the Angle of Varus	289
8.1.2	Technique of Varus Osteotomy	289
8.1.3	Postoperative Treatment	290
8.2	Effect of Varus Osteotomy on the Knee	296
8.3	Results	300
8.4	Statistics	300
9	Pathogenesis of Superolateral Types d ₁) and d ₂) Osteoarthritis	317
10	Therapy of Superolateral Types d ₁) and d ₂) Osteoarthritis . .	323
10.1	Varus-Extension Osteotomy for Type d ₁)	323
10.1.1	Reduction of Compressive Force	323
10.1.2	Increase in Width of Weight-Bearing Surface . . .	323
10.1.3	Statistics	323
10.2	Valgus-Extension Osteotomy for Type d ₂)	324
10.2.1	Reduction of Compressive Force	324
10.2.2	Increase in Width of Weight-Bearing Surface . . .	324
10.2.3	Results	324
10.2.4	Statistics	324
11	What to Consider When Faced with a Patient Suffering from Osteoarthritis of the Hip	337
11.1	Errors to Be Avoided	337
11.2	Indications for Osteotomy and Total Hip Replacement	337
12	How to Reduce Stress in the Hip Joint	347
12.1	Shifting the Centre of Gravity (S_5) Towards the Supporting Limb	347
12.2	Using One Stick	353
12.2.1	One Stick on Healthy Side	353
12.2.2	One Stick on Diseased Side	360
12.3	Using Two Sticks	369
12.4	Carrying a Weight	372
12.5	Conclusion	373
13	Summary	374
14	Appendix: Notes on Principles of Mechanics and Dynamics	374
14.1	Principles of Mechanics	375
14.2	Principles of Dynamics	375
14.3	Culmann's Theorem	376
	References	381
	Subject Index	385
